“Dyer’s Value-Added Service to Our Customers”
We can look at a part drawing and say, “here is what you need.”

1. Free, fast and experienced gage **application engineering**, Gage R & R capability, guaranteed with each requirement.
2. Many **unique gages** with more models and more proven gage designs.
3. **Precise, accurate, repeatable** Gage R & R capable and and table gages.
4. Fast, easy to use, **24-7 shop-rugged** quality gages.
5. King of specials and **custom designs**.
6. **Quick delivery**, all gage packages tested for function and accuracy.

Look for Dyer’s **Maximum Measuring Accuracy** on each series of gages. When we know the part’s measuring application Dyer guarantees we will meet your Gage R & R requirements.

Look for our “Build Your Own Gage” Package logo for each gage series.

Most Dyer gages are designed as modular build-up systems. This gives our customers choices when selecting components, accessories, indication and setting masters for each gaging situation. Contact Dyer and we will help you select the right gage package for your application.

GAGE R & R CAPABILITY, A FUNDAMENTAL QUALITY PRACTICE

Dyer guarantees a $\leq 10\%$ Gage R & R with all our bore gages.

Using Gage R & R qualified Dyer bore gages assure that you will always be using the correct gage for the measuring application. Dyer will meet a $\leq 10\%$ Gage R & R requirement even on 0.0002" (5 μ) tolerance bores.

What is Gage R & R?

Gage Repeatability and Reproducibility (Gage R & R) capability standards have direct implications for parts makers and for gage manufacturers. Repeatability is the ability of an operator using a single gage to obtain the same measurements during a series of tests. Reproducibility is the ability of different operators to obtain similar results with the same gage. Gage R & R blends these two factors together to determine a measuring system's reliability, and its suitability for a particular measuring application.

Dyer offers more bore gage designs and more measuring options

Designed for precision bore measuring Dyer's rugged gages make gaging a "hands off" process. Advances in gage technology have brought significant improvements to the measuring process. Non-tipping two point contact bore gages assure our customers that the accuracy and repeatability of measurements doesn't depend on the skill of the operator. Dyer's "hands off" bore gages guarantee that every measurement taken with our non-tipping gage is verifiably repeatable and accurate.

The best gage for the job, more gage options and more gaging solutions

Using Dyer's Gage R & R rated bore gages assures you will always be using the right gage for your measuring application.

For example, a gage design that meets the Gage R & R requirements for a 2.00" bore, may be unsatisfactory on 8.00" bores. A gage that meets a $\leq 10\%$ Gage R & R for a bore tolerance of 0.001" may not be satisfactory at a tolerance of 0.0003".

Gage R & R standards will help parts makers identify the best gage for the job.

Why Gage R & R Machine and Process Capability Studies

When establishing a capability study, you first have to select critical dimensions to be examined. Then you collect as much data as possible.

Only with Gage R & R rated gages can you be sure that you are collecting exact data, and establish the control limits for the process assuring it is really under control.

SPC

The basis for accurate SPC charting is directly related to the accuracy, reliability and repeatability of the gage making the measurement.

Only with Gage R & R rated gages can you be sure that your measurement numbers are exact.

Dyer knows Gage R & R – We add value to your process

We know the operating ability of our gages in most measuring situations. We guarantee that our gages are Gage R & R capable in each application.

We will run a Gage R & R study on your parts at our facility before we ship the gage.

Our Gage R & R capability assures you are using the right gage and making exact measurements.

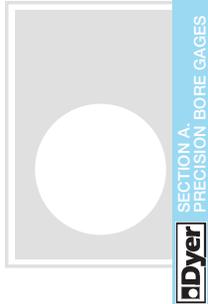

The Bottom Line

We identify the best gaging solution for each customer application. Dyer gages provide short and long term improvements that help you produce better parts.

Gage R & R rated gages benefit, six sigma manufacturing, zero defects, CPK and SPC. That goes right to your bottom line.

DYER'S HIGH ACCURACY & REPEATABILITY ADVANTAGE

Dyer's experience and superior gage designs result in better bore gaging

Non-tipping, two point contact "hands off" bore gages

Dyer is a technical leader in bore gages. We have a large selection of proven gage designs to choose from when we are evaluating a bore measuring application. Many of our new designs make bore measuring a "Hands off" process.

Advances in gage technology and electronics have brought significant improvements to the bore measuring process. Dyer's non-tipping two point contact bore gages assure parts manufacturers that the accuracy and repeatability of a measurement does not depend on the skill of the operator. These "hands off" gages guarantee that every measurement taken is correct and Gage R & R capable.

Eliminating Operator Error

A look at the operation of a non-tipping gage will show the instrument's advantages. The gaging process is quick and easy. The operator inserts the gage and takes a reading without having to do any rocking or aligning. Operator influence is a problem of the past.

Superior Design and Construction

Here are real reasons Dyer's bore gages are the industry's best performers.

◉ Linearity

$\leq \pm 0.000040"$ (± 0.001 mm) a simple direct transfer of the contact point movement to the measurement indicator. This results in the best linear accuracy.

◉ Repeatability

$\leq \pm 0.000040"$ ($\leq \pm 0.001$ mm)

◉ Automatic Centering

The correct self-centering base for each measuring range assures axial and radial alignment in each bore every time it measures.

◉ Gage Stability

Heat Stabilization. The handles (measuring transfer shafts) of all Dyer precision bore gages are made from Invar steel, a special alloyed steel that resists temperature change. This eliminates errors due to circulating temperatures.

 Repeatability $< 0.000040''$ (< 0.001 mm)
 Gage R & R $\leq 10\%$ capability when measuring high tolerance bores.
 Please contact Dyer with your application.

Custom Standards and Specials

Dyer also makes special design measuring sleeves to fit your unique application. These special design heads can have:

- More contact travel, rough cut/final cut possibilities
- Many unique sleeve profiles
- Extra long or short sleeve lengths
- 2 or 3 point contacts
- Special depth stops
- Special masters
- Special contact shapes, types and sizes
- Special coatings
- 2, 3, or 4 \emptyset planes and radial axis

CAD Prints and Drawings

Available from Dyer is our "Quick Reference" 8-1/2" x 11" reduced drawing of our 240 Series Bore Gages. CAD drawings of our gages on your drawing paper can be done. Contact Dyer Applications Engineering Services.

The 240 Series Measuring Sleeves are dedicated gages that are specifically machined to fit a customer's bore diameter. It is very important to know your part tolerance to make sure the gage has the appropriate range to cover the part specification. On average, the total travel of a gage head is 0.010" (0.25mm).

The "h" dimension is the distance from the centerline of the measuring contact to the bottom of the measuring sleeve. This determines how close to the bottom of a bore you can measure. There are basically (3) different standard "h"

dimensions. A thru bore "h" dimension is generally 0.400" (10mm), a blind bore "h" dimension is 0.118" (3mm) on average, and a super blind "h" dimension is 0.039" (1mm).

A complete setup includes a measuring sleeve head, a holder, an indicator (mechanical or electronic), and a master ring. If a customer already has an existing holder, indicator, or master, they can adapt the 240 Series Measuring Sleeve directly to it.

We encourage a customer to send us a drawing or sectioned part print of their specific measuring requirement. Our engineering staff will be able to clearly identify the proper measuring sleeve needed to perform the task. A formal quotation can be generated listing all the items needed to make a complete system.

Our standard delivery for diameters between 0.118" (3mm) and 5.118" (130mm) is 1 to 2 weeks. Our rush delivery for these same sizes is 1 to 2 days and carries with it a premium charge. We also have an "extended" (or longer delivery) of 6 weeks for these sizes for those customers that are not in a hurry and want a discounted price. Contact Dyer customer service for further details.

240 Series sizes under 0.118" (3mm) and over 5.118" (130mm) have a standard delivery of 6 weeks. There are no "rush" or "extended" delivery options for these 240 Series sizes. (Look into the Dyer 440 Series Twin Cross for larger dedicated heads for faster delivery.)

240 SERIES INDICATING PLUG BORE GAGES

SECTION A
PRECISION BORE GAGES
Dyer

Maximum Measuring Accuracy
Linear $\leq \pm 0.000040"$ ($\leq \pm 0.001$ mm)
Repeatability $< 0.000040"$ (< 0.001 mm)

Fast Delivery 24-48 hours or 1-2 weeks • 240 Bore Gages

Fast, Accurate and Repeatable Measurements

Dyer's 240 Series indicating plug gages are used for repetitive bore measurement applications or dedicated high volume production runs.

This rugged and dependable 24-7 bore gage was designed with the operator in mind. Fast, easy to use and no operator error.

Best in Gage R & R performance with an impressive $\leq 10\%$ capability, even during high tolerance applications and when measuring small or large bores.

Heavy-duty measurement transfer holder is made of Invar steel with hand insulator shield

Sleeve tool steel Rc62-65, Chrome coating optional

Fast maintenance service, returned "just like new"

We can turn your gage around in one day at our Lancaster facility. Also, if part dimensions change it is possible to rework your existing measuring head to a new size. If you need to quickly replace another manufacturer's measuring head, just tell us the model and thread size, we will supply a head that will fit your present holder. "Quick factory floor problem-solving reduces downtime and assures quality."

ALL CUSTOM MEASURING SLEEVES
240 Series SIZES
0.118" (3 mm) thru
5.118" (130 mm)
Fast Delivery, Rush 24-48 hours
or standard 1-2 weeks

Complete System Availability

Dyer is also a "one-stop" system supplier. We package in a single case the measuring sleeve, depth stop, gage holder, indicator and setting master. We will supply the indicator of your choice on each 240 Series gage. Each set is inspected for function and accuracy before shipping. "Single source responsibility assure gages arrive on time, complete and working."

Automatic Centering and No Operator Error

In achieving the highest accuracies, the centering sleeve is made approximately 0.001" – 0.002" under the low limit of your minimum bore tolerance. The carbide ball contact points housed in the centering sleeve, along with the free floating movement, permit the highest measuring accuracy.

The measurement is "locked in" and no operator error is possible. A special chamfer at the bottom of centering sleeve (top chamfer is optional) permits easy entry into the bore.

The spring-loaded outward contact pressure along with automatic centering and non tipping means no operator error when measuring bores.

Two-Point Floating Contact Measuring System

Positive two-point outward contact pressure and continuous on-line indication of the measured value permits the operator to see the bore's profile. The following geometry can be measured.

Ovality

Barrel Shape

Taper

Hourglass or bell mouth

DYER DELIVERS ADDED VALUE WITH OUR MEASURING SLEEVES

240 Series Measuring Sleeves are adaptable to other manufacturers' handles.

FREE, Fast Application Engineering

Contact Dyer via web site, e-mail, fax or phone with your measuring application.

We will immediately review your specific application and supply you with a detailed quote.

We can look at a part drawing and say, "Here is what you need."

Fast Delivery
24-48 hours or 1-2 weeks

Fast service on custom dedicated measuring sleeves

Notable Features

Dyer supplies measuring sleeves with post threads M6, M10, M11, M12 with delivery as short as 24-48 hours Rush Delivery. Dyer's standard post thread is an M11 and our competition uses M6, M10 and M12. Now, when you quickly need to replace another manufacturers measuring sleeve, just tell us the model and we will supply a Dyer sleeve with the correct thread that will fit your present holder.

It is easy to change over to Dyer measuring sleeves.

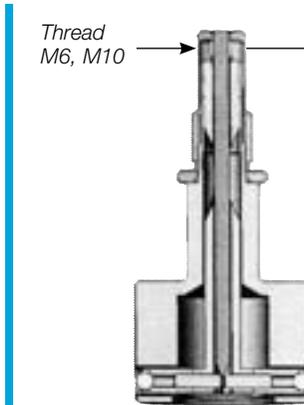

All Dyer carbide measuring needles can be taken out of the sleeve without use of a tool. Just screw off the security cap/nut. The needle movement is securely guided during the measurement transfer assuring accuracy.

Large sleeve design

SPECIAL ACCESSORY OPTIONS FOR DEDICATED GAGING

Special Contact Points, Form, Size and Material Type

Carbide balls – Standard on all 240 Series gage heads. Special sizes are available

Ruby, Ceramic, Chrome, Delrin and Industrial Diamond balls – Special ball materials and sizes are available depending on your unique part application needs.

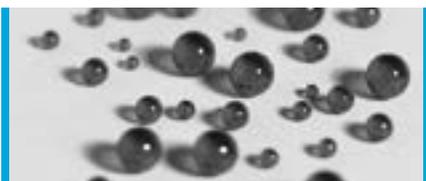

Aluminum and other non-ferrous metals measuring

A sliding friction between carbide and aluminum or other non-ferrous metals can cause built up local heating at the contact points when measuring. This can result in aluminum sticking to the contact points.

Ruby, ceramic or chrome contacts and Dyer's push button handle are solutions to this special application.

Carbide balls

Ruby balls

Mushroom Contacts

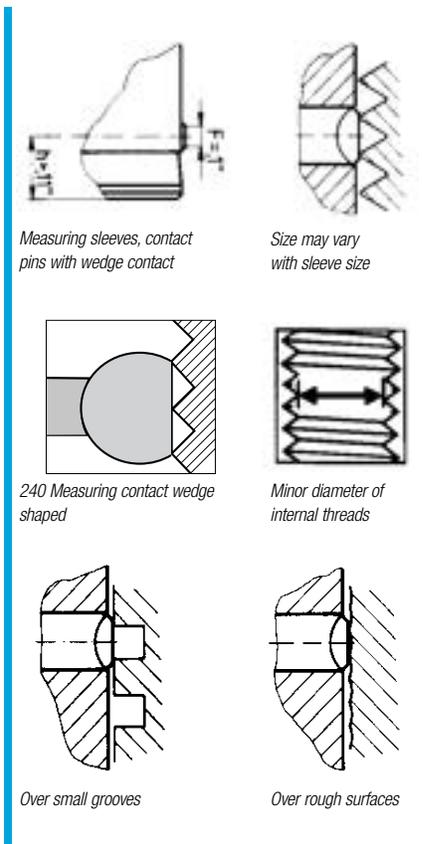

Large radius contacts are used for special applications. A radius that matches the bore size is also available. Contact Dyer.

Chisel Contacts – Special wedge contacts to measure the minor diameter of threads, gears, splines and other special internal profiles. These contacts are designed to span two or more teeth. Contact Dyer with your requirements.

Soft Surface Measuring

Soft part surface materials are scratch sensitive and the measuring pressure of the gage can cause deforming of the bore's surface. This gage application can be solved with large radius contacts of Chrome or Delrin. Dyer's push button handle is used to reduce contact point pressure when moving the gage in the bore.

Chisel contact applications

Special Chamfer Options 240 Series Measuring Heads

Unique Standard Insertion Chamfer

The insertion chamfer of Dyer's measuring sleeve allows for easy entering of the gage into the bore with no tilting. The height of the chamfer depends on the diameter of the sleeve.

Special 2nd Insertion Chamfer

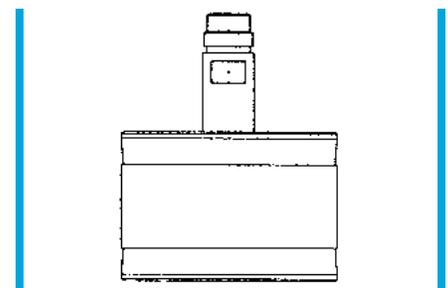

When measuring interrupted (same size) multiple bores on one line the return exiting of the measuring head can be difficult. To solve this problem we supply a measuring head with a second top chamfer. (See Dwg. 1)

Special Insertion Chamfer for Automatic Gage Measurement

A floating holder that permits radial movement is used to hold the gage. This measuring head is offered with a special chamfer. (See Dwg. 2)

Special No Chamfer Measuring Head

When measuring very short or thin bores, an insertion chamfer can result in bad centering. In these cases we supply a gage with little or no chamfer with a depth stop. Contact Dyer with your application requirements.

Drawing 2.
240 Sleeve with 30° automatic insertion chamfer

240 SERIES THRU BORE MODELS

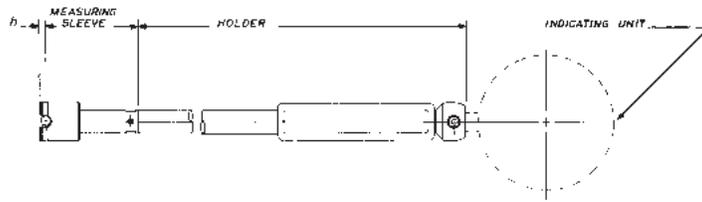

Maximum Measuring Accuracy

Linear $\pm 0.000040''$ (± 0.001 mm)
 Repeatability $< 0.000040''$ (< 0.001 mm)
 Gage R & R $\leq 10\%$ capability when measuring high tolerance bores. Please contact Dyer with your application.

- Used to measure bores without a bottom
- Contacts are set towards the middle of sleeve to help stabilize gage in part before measurement
- Insertion chamfer makes it easy for gage to enter part
- Carbide ball contacts are standard, but other materials are available upon request
- Special contact profiles are available: such as wedge, mushroom, and special radius versions
- If the length of the bore is short, then a depth stop is recommended to stabilize gage in bore

(See depth stop page for further details)

240/440 SERIES HANDLES & DEPTH EXTENSIONS

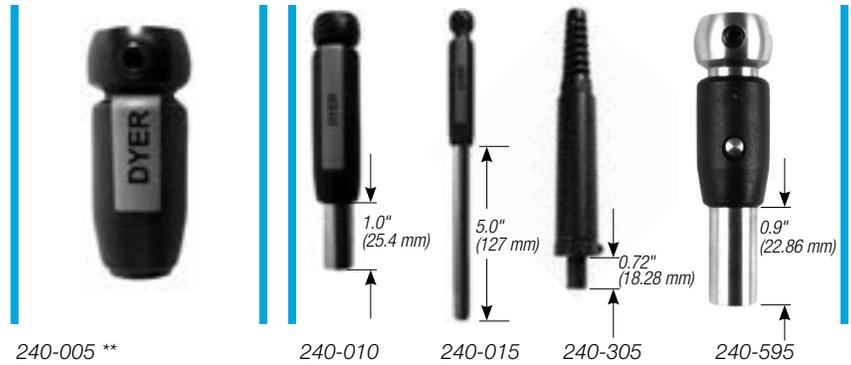

240/440 handles will accept 0.375" or 8 mm diameter stem indicator. Each handle includes two interchangeable brass bushings for each diameter and an allen wrench.

Heat Stabilization
Handles of all Dyer precision bore gages are made from Invar steel, a special alloyed steel that resists temperature change. This eliminates errors due to circulating temperatures.

Measuring Sleeve Holders

Standard Sleeve Holders

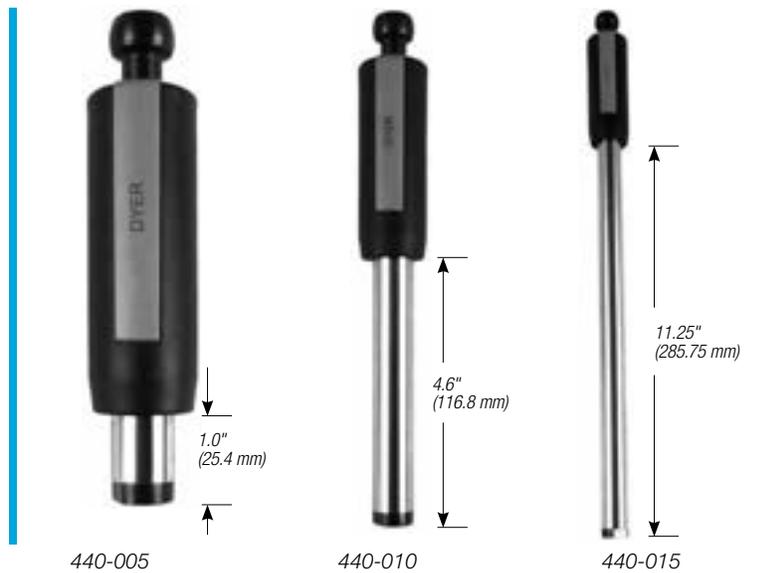

Order Number	Shaft Ø	Holder Length (overall)
240-005	0.472" (12 mm)	1.97" (50 mm) Less meas. contact pressure
240-010	0.472" (12 mm)	4.13" (105 mm)
240-015	0.472" (12 mm)	9.25" (235 mm)
240-305	0.550" (13.97 mm)	5.50" (140 mm) for electronic transducers
240-595	0.400" (10 mm)	2.75" (70 mm) Retractable (for super blind sleeves)

Larger Ø Sleeve Holders*

Order Number	Shaft Ø	Holder Length (overall)
440-005	0.708" (18 mm)	5.50" (139.7 mm)
440-010	0.708" (18 mm)	9.10" (235 mm)
440-015	0.708" (18 mm)	15.75" (400 mm)

*recommended for diameters larger than 2.00" (51 mm)

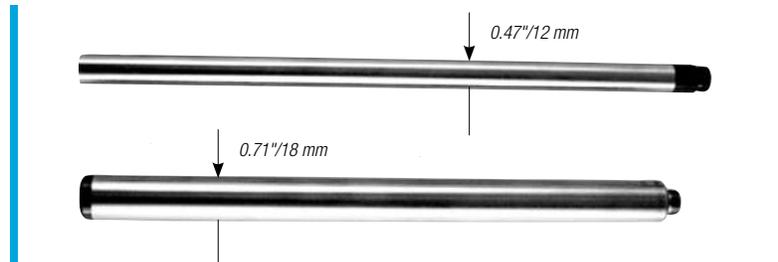

240 Series Depth Extensions*

Order Number	Extension Ø	Length
240-309	0.47" (12 mm)	3.9" (100 mm)
240-310	0.47" (12 mm)	9.8" (250 mm)
240-311	0.47" (12 mm)	19.7" (500 mm)
240-312	0.47" (12 mm)	29.5" (750 mm)
240-313	0.47" (12 mm)	39.3" (1000 mm)

*for measuring sleeves larger than 0.472" (12 mm) in diameter

Depth Extensions

440 Series Depth Extensions*

Order Number	Extension Ø	Length
440-104	0.708" (18 mm)	3.9" (100 mm)
440-105	0.708" (18 mm)	9.8" (250 mm)
440-110	0.708" (18 mm)	19.7" (500 mm)
440-115	0.708" (18 mm)	39.3" (1000 mm)

*for measuring sleeves larger than 0.708" (18 mm) in diameter

For measuring sleeves smaller than 0.472" (12 mm) in diameter that require depth extensions, please contact Dyer.

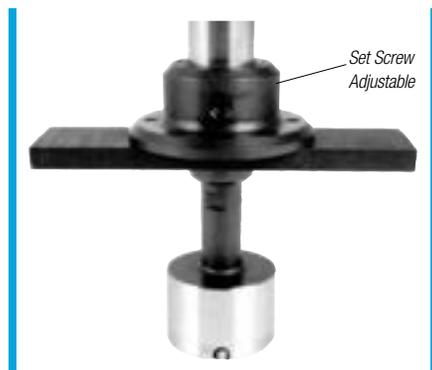

** 240-005 Holder does not have a transfer rod. This means the only measuring pressure being applied to the transfer rod is from the indicating unit. Also, most likely a spindle extension or a longer contact will have to be added to the indicating unit.

240, 440, 441 SERIES STANDARD DEPTH STOP ACCESSORY OPTIONS

These depth stops are lightweight and easy to position and use. They will work on all types of Dyer bore gages. When purchased independently, please specify handle diameter of the gage.

240 SERIES SPECIAL MEASURING SLEEVES

Fast, accurate, repeatable bore gaging

- Speed gaging times
- Gage multiple dimensions with one gage
- Automatic calculations
- Absolute numbers
- IP/OP to computer and machine
- SPC data

Special Sleeves – 2 sets of contacts in 1 plane

Gaging Application

Measure one bore diameter and out-of-round at specific depth with one gage and with no rotation of the gage in the bore.

Measuring Sleeve Design

Two (2) sets of floating contacts at 90° to each other, in one line and at one depth location.

Gage System Solution Configurations

1. 240 Special Sleeve

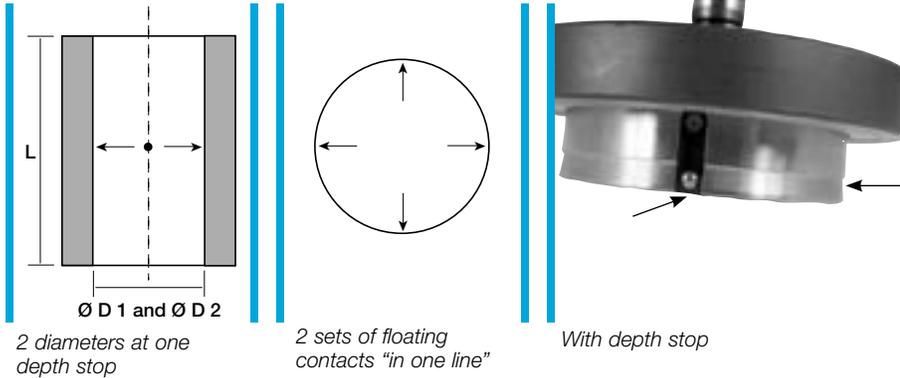

One depth stop, two handles, two electronic indicators, one ring gage set master per diameter.

2. 240 Special Sleeve

One depth stop, two handles, two digital electronic pencil probes, one digital readout that does calculations automatically, one ring gage set master per diameter.

3. Special All-Electronic Sleeves

Contact Dyer. One depth stop, two handles, one digital readout, one ring gage set master per diameter.

Special Sleeves – 2 sets of contacts in 2 planes

Gaging Application

Measure two bore diameters at two depth locations for diameter, taper, out-of-round, TIR, step or thru bore applications.

Measuring Sleeve Design

Two (2) sets of floating contacts at one or two radial positions, at two depth locations.

Gage System Solution Configuration

1. 240 Special Sleeve

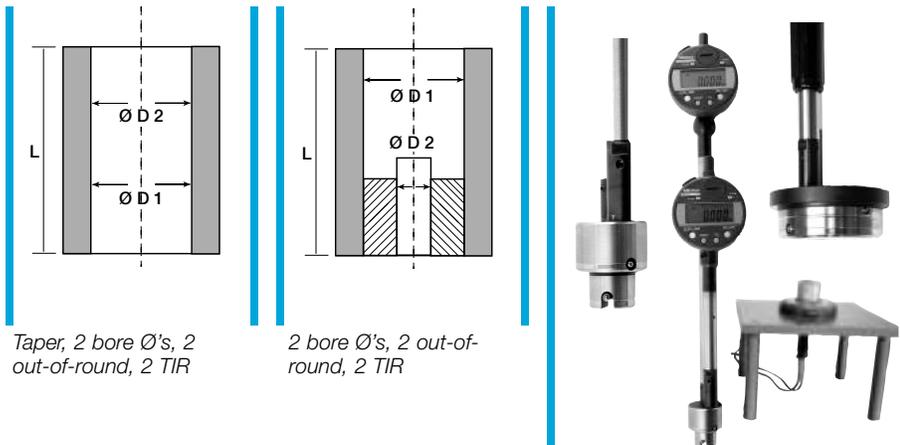

One depth stop, two handles, two electronic indicators, one ring gage set master per diameter.

2. 240 Special Sleeve

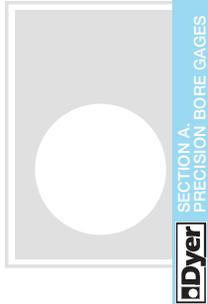

One depth stop, two handles, two digital electronic pencil probes, one digital readout that does calculations automatically, one ring gage set master per diameter.

3. Special All-Electronic Sleeves

Contact Dyer. One depth stop, two handles, one digital readout that does calculations automatically, one ring gage set master per diameter.

240 SERIES SPECIAL MEASURING SLEEVES

Fast, accurate, repeatable bore gaging

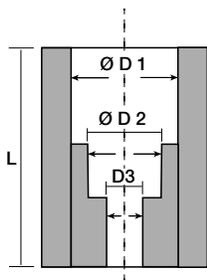

- Speed gaging times
- Measure multiple dimensions with one gage
- Automatic calculations
- Absolute numbers
- IP/OP to computer and machine
- Special sleeves available with 5 to unlimited contact positions. Contact Dyer with your application.

Special Sleeves — 3 sets of contacts in 3 planes

Gaging Application

Measure three bore diameters at three depth locations for diameter, taper, out-of-round and TIR.

Measuring Sleeve Design

Three set of floating contacts at three radial positions and at three depth locations.

3 Ø's, Taper, out-of-round, TIR

Gage System Solution Configuration

1. 240 Special Sleeve

One depth stop, three handles, three electronic indicators, one ring gage set master per diameter.

2. 240 Special Sleeve

One depth stop, three handles, three digital electronic pencil probes, one interface module and cable that connects to one digital read-out or direct to computer and does calculations automatically, one ring gage set master per diameter.

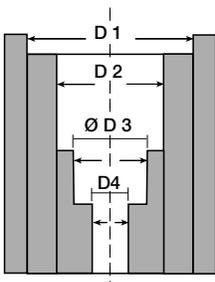

3. Special All-Electronic Sleeves

Contact Dyer. One depth stop, three handles, one interface module and cable that connects to digital read-out or direct to computer and does calculations automatically, one ring gage set master per diameter.

Special Sleeves — 4 sets of contacts in 4 planes

Gaging Application

Measure four bore diameters at four depth locations for diameter, taper, out-of-round, and TIR.

Measuring Sleeve Design

Four sets of floating contacts at four radial positions and at four depth locations.

Gage System Solution Configuration

1. 240 Special Sleeve

One depth stop, four handles, four electronic indicators, one ring gage set master per diameter.

2. 240 Special Sleeve

One depth stop, four handles, four digital electronic pencil probes, one interface module and cable that connects to one digital read-out or direct to computer and does calculations automatically, one ring gage set master per diameter.

3. Special All-Electronic Sleeves

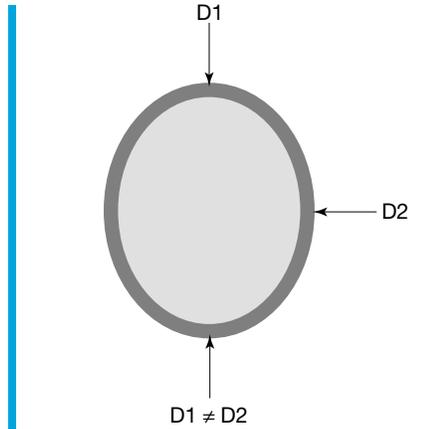

Contact Dyer. One depth stop, four handles, one interface module and cable that connects to digital read-out or direct to computer and does calculations automatically, one ring gage set master per diameter.

240 SERIES 3-POINT & 1-POINT MEASURING SLEEVES

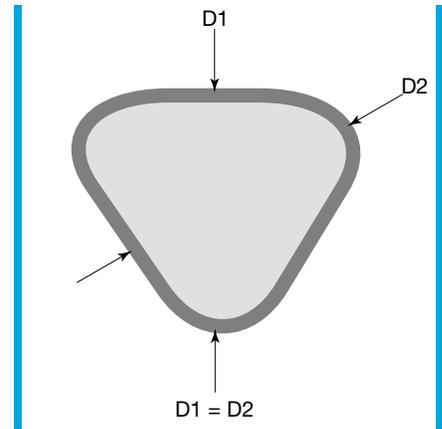

3-Point Measuring Sleeves

Three point contact bore gaging is designed to measure trilobing and polygonal shaped bores during the machining process. For example, centerless grinding process can produce three lobe parts. This can result in a non-fitting part assembly causing vibration, wear, and fatigue. Only 3-point contact gages are capable of measuring odd number lobes. See Figure B, Chart 1. Only 2-point contact gages will measure out-of-round conditions. See Figure A.

A. Elliptical Form, 2-point gaging

B. Trilobal Form, 3-point gaging

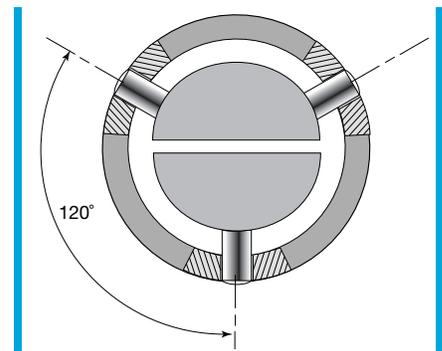

Note: When ordering 3-point contact sleeves just call Dyer and let us know your application.

3-point measuring sleeve ranges 0.390"-1.575" (10-40 mm)

By way of a special grinding of the measuring needle the linearity/maximum deviation in accuracy is $\leq 1\%$ of the measuring travel (max. travel is 0.008" [0.2 mm]). This special floating contact design (see Dwg. 1) is used to measure smaller size bores. Also the three contact balls can be located at different radial locations if the bore wall is interrupted. Fax or e-mail Dyer your application.

240 Series Group 1, 3-point measuring heads with special contact point location for interrupted bore

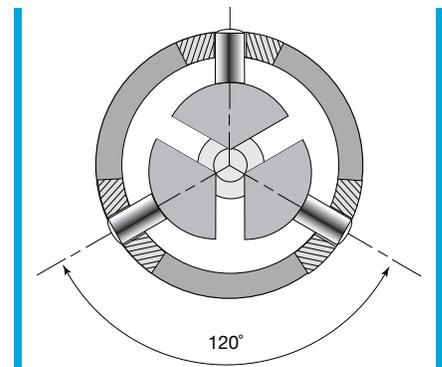

Drawing sizes <40 mm

3-point measuring sleeves with true 120° 3-point contact measuring ranges 1.575"-5.18" (40-130 mm)

This design has three independently moving contacts positioned at 120°. Sizes larger than 5.118" (130 mm) available. Contact Dyer with your application.

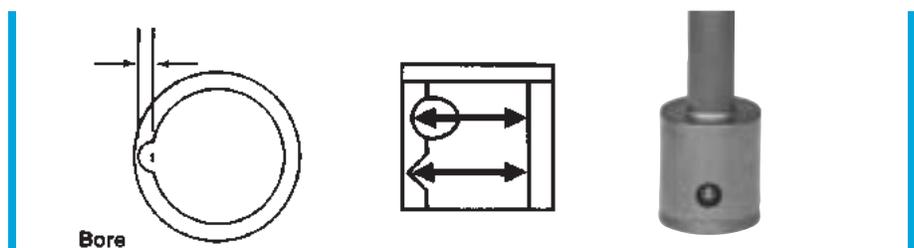

240 Series Group 2, 3-point contact sleeves for sizes >1.575" (40 mm)

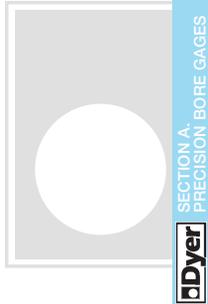

Drawing sizes >40-130 mm

1-Point Contact Measuring Sleeves

Measure the depth of a groove in a bore or parallel surface. These measuring heads are made with only one moveable contact point. The contact point can be retracted. Contact Dyer with your application.

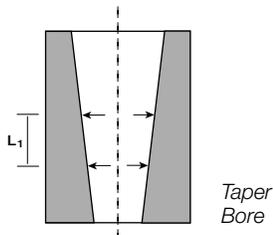

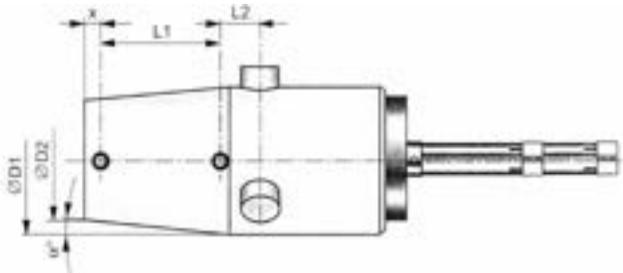

240 SERIES SPECIAL PROFILE SLEEVES

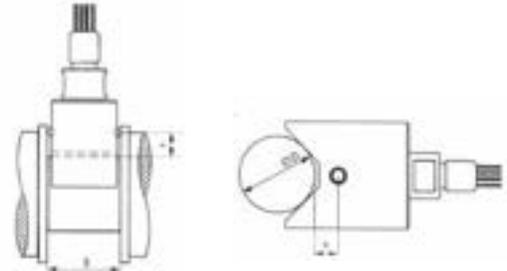

Measure Cone-Shaped Bores

Cone-shaped bores are defined by the taper angle and the diameters at two specific measuring depths. The integrated depth stop positions the measuring axis at the exact depth. You will measure angle, taper pitch, diameters D1 and D2, out-of-round, and TIR with this gage.

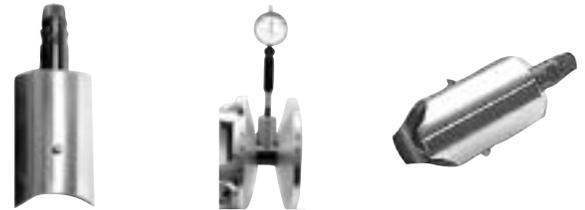

Measure Parallel Surfaces

240 Series angled and/or radius sleeve bottom is a stop to locate gage on shaft diameter or tapered parallel dimension.

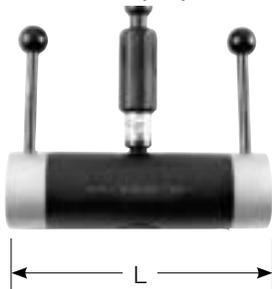

Measure crank shaft face.

Measure a tapered ID at a specific height above shaft diameter.

SPECIAL GROUND TO PROFILE SLEEVES 240 Series sleeves

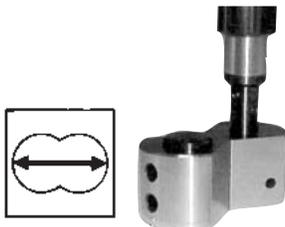

Custom shapes that will measure your irregular shaped hole. Fax or e-mail Dyer your measuring requirements.

SPECIAL APPLICATIONS HAND & TABLETOP GAGES

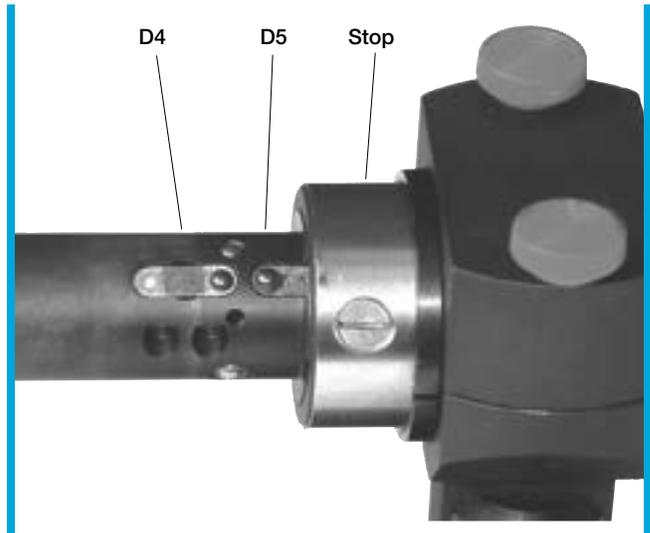

SHOW DYER YOUR APPLICATION. WE WILL HELP YOU SELECT THE RIGHT GAGE.

Special "All Electronic" 240 Series Bore Gage

Special 240 Series

Five sets of special small electronic contacts are placed in a measuring head. All five diameter measurements are made at once. Digital readings are displayed on one screen.

Special 240 Series

Part is placed on gage's measuring head and pushed against a part stop. Gage measures smallest diameter at two axial positions and a second larger diameter at a three axial position.

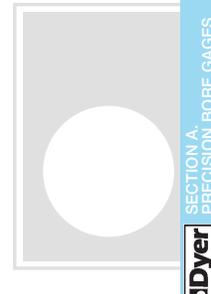

Tabletop stand for 240 Series gages

These gage stands will hold any number of 240 Series gages.

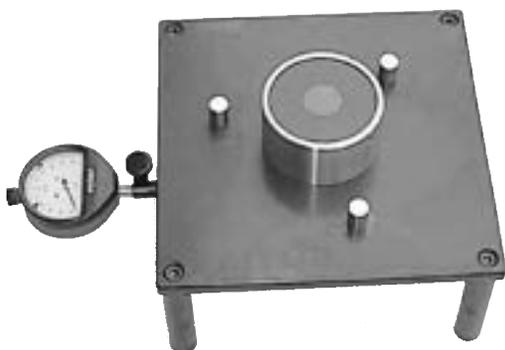

The part is placed on the gage head. Each gage has a part stop.

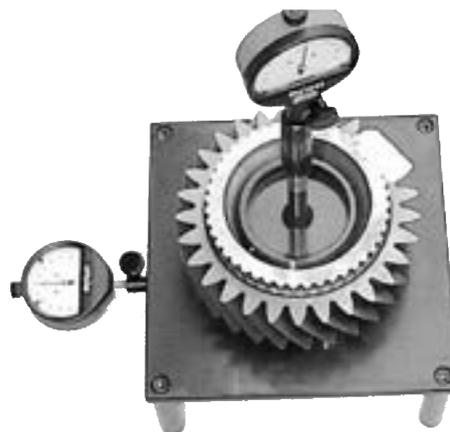

SHOW DYER YOUR APPLICATION. WE WILL HELP YOU SELECT THE RIGHT GAGE.

Measure two (2) different face diameters located on opposite sides of that part.

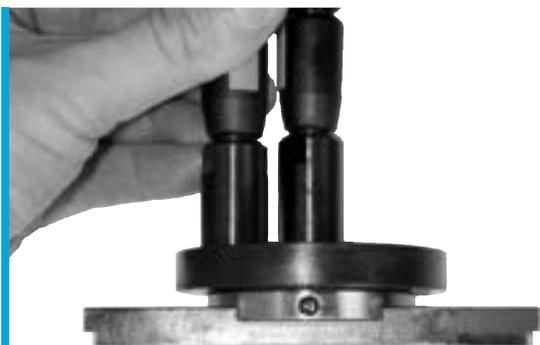

240 Series Special

This tabletop gage station positions the part for measuring two diameters located opposite each other. Above is Dyer's 240 Series measuring head located vertically with three part stops.

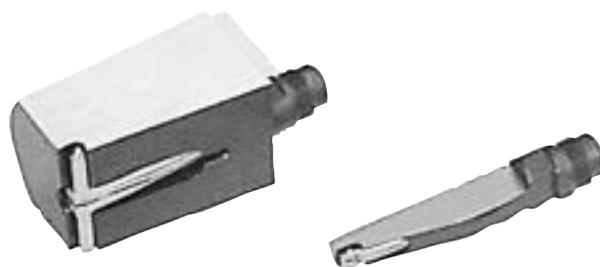

Place the part on the gage head for the first measurement. A second 240 Series gage is placed in the opposite side diameter.

Special Dual Plane

Lower contacts are measuring a large oval \emptyset . Top contacts are measuring a circular \emptyset .

240 Sleeve with a square design and blind "h" (short) measuring height

Special Dual Contacts on one Plane

Measure the minor \emptyset of a gear-type part. A special pin located on the sleeve locates the gage head in the P.D. Two \emptyset 's are measured "in one line" at 90° to each other.

Standard L

Special L

240 Sleeve with special L dimension

440 SERIES TWIN CROSS® LARGE DIAMETER BORE GAGES

Maximum Measuring Accuracy

Linear $\pm 0.000040''$ (0.001 mm)
 Repeatability $\leq 0.000040''$ (0.001 mm)
 Gage R & R $\leq 10\%$ capability in high tolerance bores

Electronic Direct Reading Absolute Numbers, Bore Gages

No tipping, automatic centering and aligning of the gage in the bore.
 Dedicated to part size and tolerance.

Notable Features

Light weight, shop-rugged design
 24-7 production gage.
 Open design allows operator to view bore when measuring.
 High accuracy and repeatability, two-point floating contact.
 Very easy to use, no tipping and no operator error.
 Tool steel Rc 62-65, carbide ball contacts, handles Invar steel.
 Armoloy coating optional.

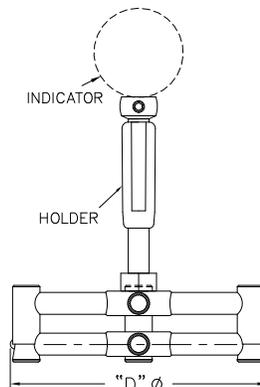

1. Choose bore gage head based on \varnothing and type of bore being measured.
2. Choose a holder.
3. Choose an indicator.
4. Use a master ring or adjustable setting master.

Fast Delivery, Rush 24-48 hours or 1-2 weeks

440 Series Twin Cross® Measuring Head

440 Twin Cross® with adjustable setting master

The "h" dimension is the distance from the centerline of the measuring conducts to the bottom of the gage head.

Twin Cross® Measure Multiple Bores "in-line"

Long reach Twin Cross® with special leading edge blind stop that stabilizes the handle, eliminating deep bore gravity errors during the measuring process.

Twin Cross® with special depth stops

Designed for large bores with depth stop requirements. Four rings are pinned into position on the four cross outer sleeves.

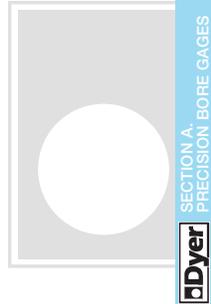

Special Twin Cross®

with additional centering rails to center the gage in a large interrupted bore.

440 SERIES LARGE BORE GAGES

Maximum Measuring Accuracy
 Linear $\leq \pm 0.000040"$ ($\leq \pm 0.001$ mm)
 Repeatability $< 0.000040"$ (< 0.001 mm)

Fast Delivery 24-48 hours or 1-2 weeks • 440 Bore Gages

Fast, Accurate and Repeatable Measurements

Dyer's 440 Series indicating plug gages are used for repetitive bore measurement applications or dedicated high volume production runs.

This rugged and dependable 24-7 bore gage was designed with the operator in mind. Fast, easy to use and no operator error.

Best in Gage R & R performance with an impressive $\leq 10\%$ capability, even during high tolerance applications and when measuring small or large bores.

Heavy-duty measurement transfer holder is made of Invar steel with hand insulator shield

Gage Head Rc62-65, Armoloy coating optional

Fast maintenance service, returned "just like new"

We can turn your gage around in one day at our Lancaster facility. Also, if part dimensions change it is possible to rework your existing measuring head to a new size. If you need to quickly replace another manufacturer's measuring head, just tell us the model and thread size, we will supply a head that will fit your present holder. "Quick factory floor problem-solving reduces downtime and assures quality."

ALL CUSTOM MEASURING HEADS
 440 Series sizes from 5.118" (130 mm) thru 16.00" (406 mm) diameters
 Fast Delivery,
 Rush 24-48 hours or standard 1-2 weeks

Complete System Availability

Dyer is also a "one-stop" system supplier. We package in a single case the gage head, depth stop, gage holder, indicator and setting master. We will supply the indicator of your choice on each 440 Series gage. Each set is inspected for function and accuracy before shipping. "Single source responsibility assure gages arrive on time, complete and working."

Automatic Centering and No Operator Error

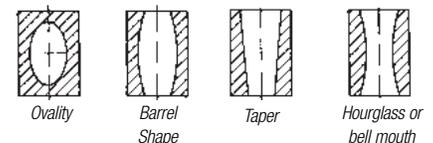

In achieving the highest accuracies, the centering sleeve is made approximately 0.001" – 0.002" under the low limit of your minimum bore tolerance. The carbide ball contact points housed in the centering sleeve along with the free floating movement permit the highest measuring accuracy.

The measurement is "locked in" and no operator error is possible. A special chamfer at the bottom of centering sleeve (top chamfer is optional) permits easy entry into the bore.

The spring-loaded outward contact pressure along with automatic centering and non tipping means no operator error when measuring bores.

Two-Point Floating Contact Measuring System

Positive two-point outward contact pressure and continuous on-line indication of the measured value permits the operator to see the bore's profile. The following geometry can be measured.

441 SERIES SINGLE CROSS® BORE GAGES, LARGE DIAMETERS, SHALLOW HOLE, STEPPED BORE

Maximum Measuring Accuracy

Linear $\pm 0.000040"$ (0.001 mm)
 Repeatability $\leq 0.000040"$ (0.001 mm)
 Gage R&R $\leq 10\%$ capability in close tolerance bores. Contact Dyer with your application.

"You just drop the gage in the bore, take your hands off the gage and view the measurement reading."

- Fast, accurate measurement.
- No operator error.
- Easy to use.
- High accuracy, 2-point gaging.
- Shop-rugged 24-7 production gage.
- Ideal for use in shallow, large bores.
- Open Single Cross® design allows operator to view bore when measuring.
- Tool steel RW 60-65.
- Carbide contact points

1. Choose bore gage head based on \varnothing and type of bore being measured.
2. Choose a holder.
3. Choose an indicator.
4. Use a master ring or adjustable setting master.

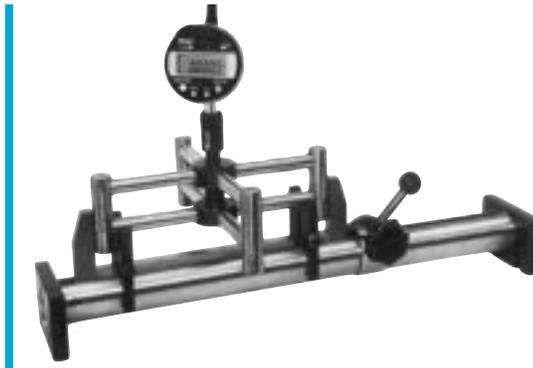

Electronic, Non-Tipping Automatic Centering & Aligning, Dedicated Size & Range

441 Series Single Cross® Gages start at 4.138" (105 mm). Gage on right has four adjustable depth stops to position gage in bore at a specific depth.

Special 441 Single Cross® measuring head is adapted for use with an existing Mahr/Federal handle. Once the Dyer adaptor is fixed on the handle all Dyer 240, 440 and 441 Series gage heads can be used for measuring. Contact Dyer.

Large Diameter Mastering 440 and 441 Series setting master guarantees repeatable measurements on large diameters. See Section G.

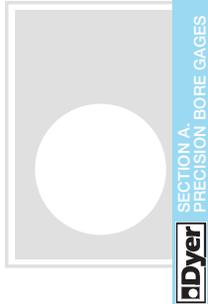

Special 441 Single Cross® with custom depth stops to position gage in the bore at a known depth location. Some gages require cross support ring.

KEYWAYS, KEYSEATS, SLOTS, GROOVE WIDTHS, PARALLEL SURFACES

Ideal Applications

- Internal keyways in shafts
- External key seats on hubs
- Woodruff key seats
- O-ring face seal widths
- Snap ring widths
- All parallel surfaces

Notable Features

- Fast, repeatable, spring-loaded contact points
- High accuracies $\pm 0.000040''/0.001\text{mm}$
- Repeatability $< 0.000040''$
- Non-tipping, no operator error
- Mechanical or electronic for SPC
- Exact measurement displayed
- Dedicated sizes

How to Order

- Send Dyer Application Engineering a marked-up print and we will quickly respond with a gage to fit your needs.

Gage assembly requires the following:

- Keyway gage head
- Holder
- Indicator (digital dial)
- Parallel setting master

432/433 Style keyway

438 Series keyway gage with 209-020 retractable handle and 900-105 electronic indicator

430/431 Style keyway

436/437 Style keyway

432/433 Style keyway

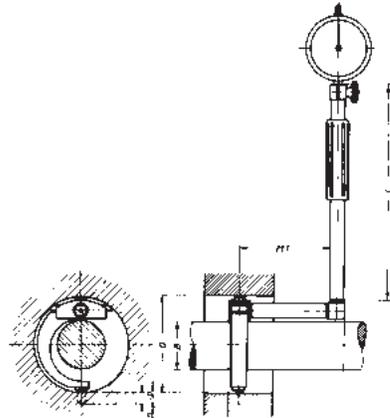

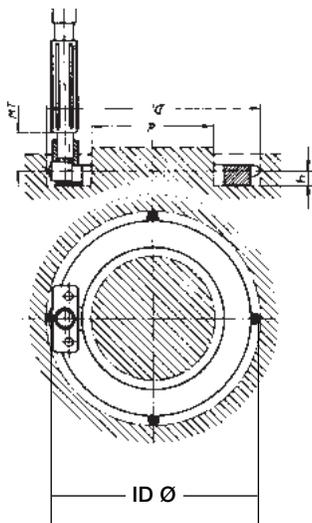

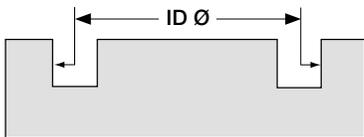

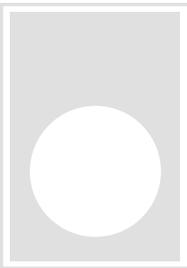

209-020 retractable handle with compression bushing holding system (for Series 430/432/434/436/438)

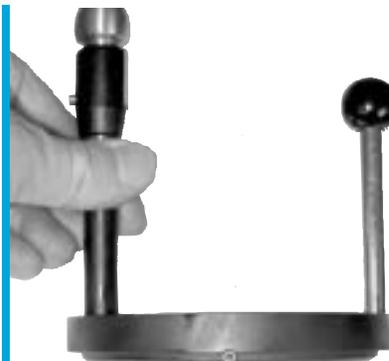

240-595 retractable handle with threaded end holding system (for Series 431/433/435/437/439)

282 SERIES SPECIAL APPLICATIONS

281 Series Specials for dedicated gaging applications

282 Series Measure full circle inside diameter measuring ring. Measures ID with hub obstruction

281/282 Full and Partial Circle Gages

- Electronic
- Blind and shallow bores
- Automatic centering
- Adjustable depth-stop optional
- Customized standards, contact Dyer office

Precision measurements of recessed inside diameters with short or long shoulder hub obstruction.

There is no operator influence when measuring the hub. Ideal for bearing surface diameters.

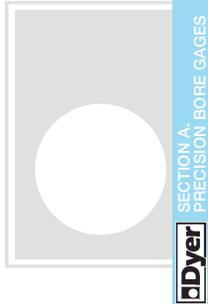

282 Series individual model to measure ID over hub, bore is deep into part

Measure precision bore with part fixture obstruction, on the machine

282 SERIES

MEASURE PRECISION *INSIDE DIAMETER* BORE WITH CENTRAL HUB OBSTRUCTION

Dyer

Maximum Measuring Accuracy

Linear $\leq \pm 0.000040"$ (± 0.001 mm)
 Repeatability $\leq 0.000020"$ (< 0.0005 mm)
 Gage R & R $\leq 10\%$ capability when measuring high tolerance applications. Contact Dyer with your specific requirements.

Fast, Accurate and Repeatable Measurements

Dyer's 282 Series Dedicated ID Bore Gage is used to measure a variety of ID diameters, but mostly built for shallow hard-to-reach ID diameters that have a recessed OD hub obstruction in the way.

These rugged and dependable 24-7 bore gages are dedicated gages that are custom made to specific part requirements. They are fast and easy to use. Send Dyer your application and we can construct a model to meet your needs.

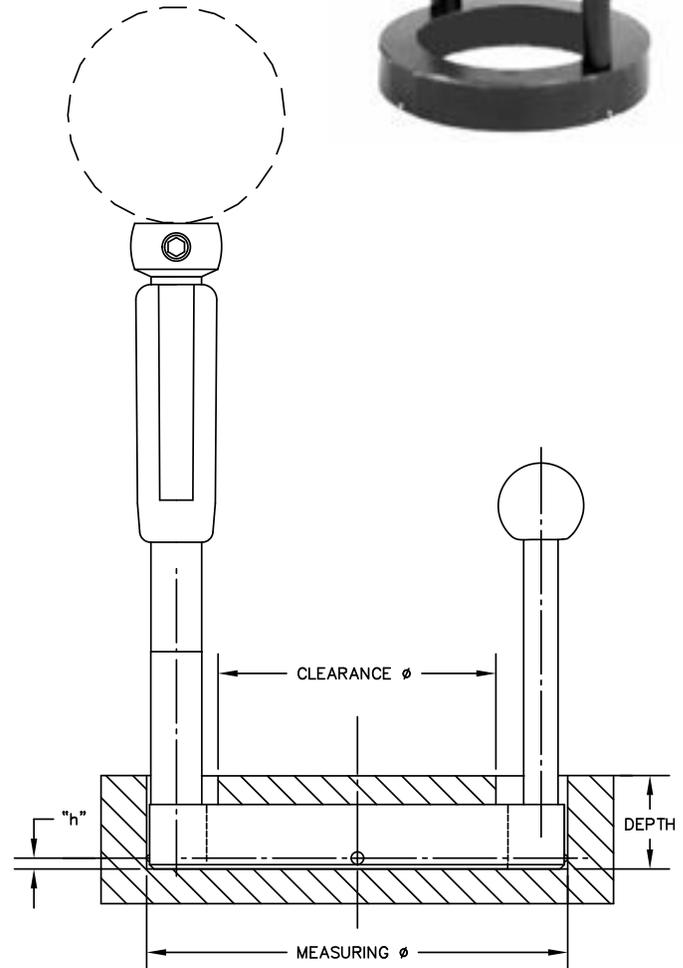

The gage performs very well when conducting Gage R&R studies. A 10% R&R can be attained even in close tolerance applications for both small and large bores.

The "h" dimension is the distance from the centerline of the measuring contact to the bottom of the gage. There is no "standard" contact height position. We can measure as close as 0.039" (1mm) to the bottom of a part. Nevertheless, we will always position the gage contacts in the best location for the job.

Carbide ball contacts are standard, but other materials are available upon request. This gage utilizes three fixed contacts and one moveable contact in order to measure the desired diameter around the obstruction features of the part.

282 Series custom measuring gages range between 1.5" (38mm) to 20" (500mm). Send Dyer your application and receive your unique quotation that will solve your measuring problem.

Dyer is your "one-stop" system supplier. We can package the measuring head, holder, indicator, and setting master in a single case. Any indicator may be used with this system. Every gage is fully tested for function and accuracy before shipping.

283 SERIES SPECIAL APPLICATIONS

283 Series Special Dedicated Full Circle and Part Circle OD Gages

Measure recessed outside diameters of short shoulder hubs with or without wall obstruction

These gages are more accurate and Gage R & R capable than snap gages. There is no operator influence when measuring the hub. Ideal for bearing surface diameters with short heights or blind end measurements in centerless grinding machines.

283 Series, OD Gage with Setting Master. Go deep into a part and measure a short OD bearing surface.

283 Series Measuring Head with special adjustable depth stop.

283 Series Measuring Head with Master Setting Disc.

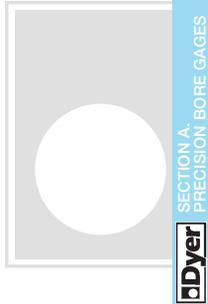

283 Special OD gage to measure splined part.

283 Special OD gage position on cylinder master.

283 SERIES PRECISION *OUTSIDE DIAMETER* INDICATING RINGS MEASURE SHORT HUB & SHOULDERS

Maximum Measuring Accuracy

Linear $\leq \pm 0.000040"$ (± 0.001 mm)
 Repeatability $\leq 0.000020"$ (0.0005 mm)
 Gage R & R $\leq 10\%$ capability when
 measuring high tolerance applications.
 Contact Dyer with your specific
 requirements.

Fast, Accurate and Repeatable Measurements

Dyer's 283 Series Dedicated OD Hub Gage is used to measure a variety of OD diameters ranging from standard high tolerance OD shafts to shallow hard-to-reach hub diameters that are recessed inside larger bores.

These rugged and dependable 24-7 bore gage are dedicated gages that are custom made to specific part requirements. They are fast and easy to use. Send Dyer your application and we can construct a model to meet your needs.

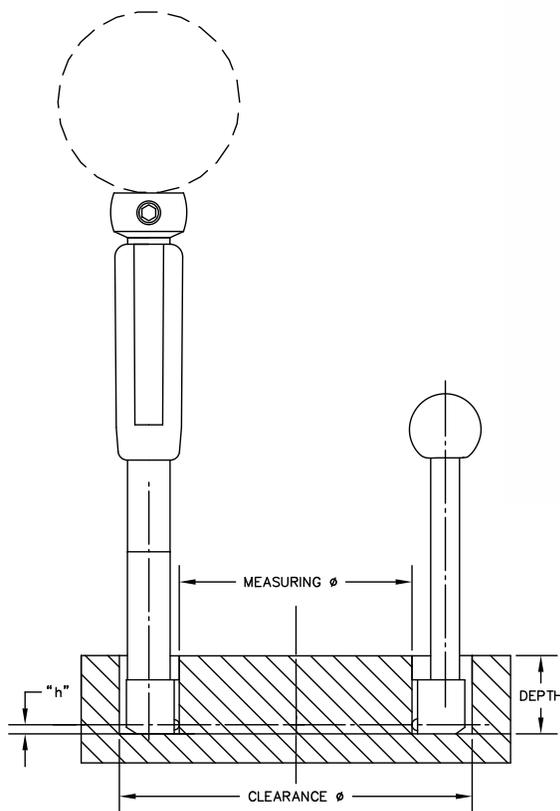

The gage performs very well when conducting Gage R&R studies. A 10% R&R can be attained even in close tolerance applications for both small and large bores.

The "h" dimension is the distance from the centerline of the measuring contact to the bottom of the gage. There is no "standard" contact height position. We can measure as close as 0.039" (1mm) to the bottom of a part. Nevertheless, we will always position the gage contacts in the best location for the job.

Carbide ball contacts are standard, but other materials are available upon request. This gage utilizes three fixed contacts and one moveable contact in order to measure the desired diameter around the obstruction features of the part.

283 Series custom measuring gages range between 1.5" (38mm) to 20" (500mm). Send Dyer your application and receive your unique quotation that will solve your measuring problem.

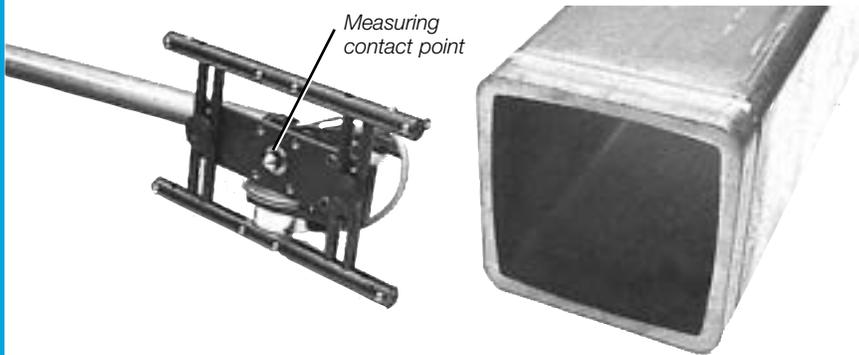

Dyer is your "one-stop" system supplier. We can package the measuring head, holder, indicator, and setting master in a single case. Any indicator may be used with this system. Every gage is fully tested for function and accuracy before shipping.

630 SERIES ELECTRONIC BORE GAGES REACH UP TO 50' DEPTHS

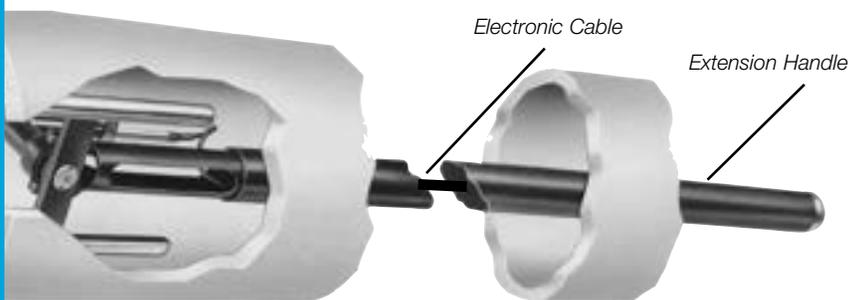

630 Series special. You can change the gage's size within the range

630 Series special

Measure diameter and clock length at one time

This special 630 Series measuring head will measure parallel distance.
(We can also LaserLine™ the extension handles to determine depth.)

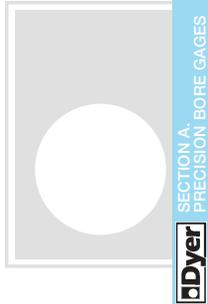

Designed for Deep Blind Hole Measurements

Extension Handles for 630 Series

Electronic Cables can be located inside the light weight aluminum extension or clipped to the outside if you are making a number of bore lengths changes.

630 SERIES DEEP REACH ELECTRONIC BORE GAGES

SECTION A
PRECISION BORE GAGES
Dyer

Maximum Measuring Accuracy

Linear $\leq \pm 0.000040"$ (± 0.001 mm)
 Repeatability $\leq 0.000020"$ (< 0.0005 mm)
 Gage R & R $\leq 10\%$ capability measuring high tolerance bores.

Notable Features

High accuracy, repeatability, long contact travel at up to 50' depths.
 Easy to use, no operator error, floating contact design moves easily in and out of bore.
 Fast accurate measurements, measuring head aligns automatically throughout the bore, and no operator error.
 Large measuring ranges.
 Cost justifiable system.
 Systems electronic indication has several options. Gage can be battery operated and completely portable. Contact Dyer with your application requirements.
 Measuring head configuration allows multiple depth extensions to be used without influencing the measurement.

Build up your own 630 system by selecting your components or contact Dyer application engineering and we'll create one for you.

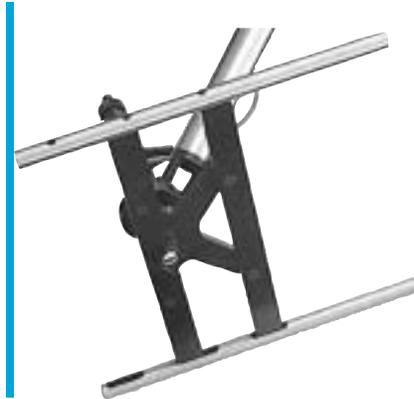

1. Measuring heads – each head includes a 39" extension.
2. Extension holders
3. Electronics
4. Adjustable set master

Measuring Applications

Measure barrel wear injection molding machines.
 Measure barrel wear food processing machines.
 Large and/or bearing surfaces.
 Irregular size deep holes.

Longer contact travel possible. Position of floating contact points on self centering base can change for blind hole applications. Contact Dyer.

630 Series measuring heads reach up to 50 feet depths

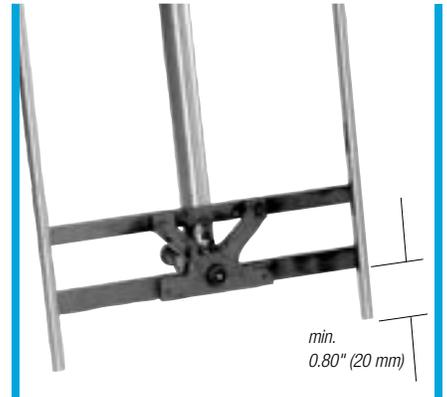

630 Series, large \varnothing measuring head. Special large ranges are available with heads. Modular design.

630 Series, full plate centering base. Available in ranges 1.38"/35 mm thru 9.05"/1230 mm.

Fixed contact point extensions

Series bottom view

Specials

Measure precision bores up to 50' depths with portable electronic amplifier and digital pencil probe

Specials

Measure precision bores up to 50' depths with field portable electronic indicator and special probe/cable

830 SERIES "NO TIPPING" BORE GAGES ROUGH CUT/FINAL CUT GAGING

Maximum Measuring Accuracy

Linear $\leq \pm 0.000040"$ (± 0.001 mm)
 Repeatability $\leq 0.000040"$ (< 0.001 mm)
 $\leq 0.000008"$ (0.0002 mm)
 Gage R & R $\leq 10\%$ capability measuring
 0.0003" (0.008 mm) tolerance bores.

No Tipping, Automatic Centering and Aligning

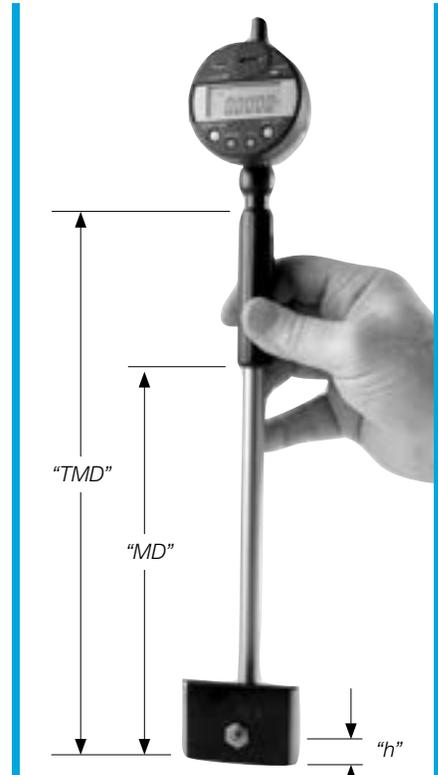

You have the flexibility to change sizes within the gage's range.

The 830 Series Bore Gages are non-tipping and self-aligning. The gage's automatic centering base is spring loaded and locks itself in "to the maximum bore diameter."

This rugged, dependable shop gage is born from our most accurate and popular 220 Series. This proven design offers our customers a fast and easy-to-use electronic bore gage.

Electronic indicator selection, see Section E, indicators ordered separately.

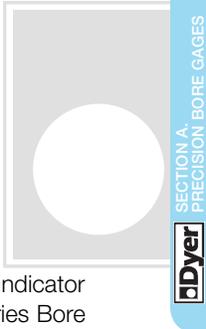

830-330 Standard Handle
 Spring-loaded, retractable, self-centering base aligns gage in the bore's measuring axis for precise Gage R & R capable measurements
 Indicator offered separately.

 Gage R & R $\leq 10\%$ measuring
 close tolerance bores.

Electronic measurements, automatic centering and aligning, and no gage tipping

You have the flexibility to change sizes within the gage's range.

Notable Features

- 10% Gage R & R at high tolerances.
- No operator error, "hands-off" gaging.
- Special self-centering base automatically aligns the gage in the measuring axis.
- Contact point travel 0.051"-0.063" (1.3 – 1.6 mm) allows rough and final cut bore measuring.
- No loss of accuracy for the full range of contact point travel.
- Centering base and contacts carbide.
- Customized standards optional, depth stops, modified centering base, contact point types and sizes.
- Determine a bore's profile.

Carbide self-centering base

Ball contact points available standard in carbide, optional in ruby, chrome, teflon

Specially designed segment

This radically machined high strength steel segment is accurately guided in a circular arc. It transfers the movement of the measuring contact point directly to a precision indicating unit.

This direct transfer and resulting accuracy, repeatability and reproducibility is exclusive to our bore gage design.

Freedom to choose

Any mechanical or electronic indicator can be used with our 830 Series Bore Gages. Optional sleeve holders are used with electronic probes.

The gage handle accepts 3/8" or 8 mm stem indicating units.

The highest accuracy and repeatability

For machine capability studies and SPC, the 830 Series gage is a leader in Gage R & R performance.

All of our 830 Series Bore Gages, small and large, are $\leq 10\%$ Gage R & R capable when measuring high tolerance bores.

No operator error/automatic centering

The spring-loaded outward contact pressure along with automatic centering/non-tipping means no operator error when measuring bores.

Rough cut/final cut bore gage

The spring-loaded, non tipping, self centering base, along with 0.051" to 0.063" Contact Point Travel (depends on model) makes this gage perfect for rough cut/final cut bore measuring. There is no loss of accuracy for the range of the contact point travel. One Ring Gage will set both measurements.

Precise two-point contact measuring

Positive two-point outward contact pressure and continuous on-line indication of the measured value.

Measuring deviations in a bore's shape is accomplished by turning or moving the gage up and down in the hole.

Ovality

Barrel Shape

Taper

Hourglass or bell mouth

Unlike three-point contact bore gages that average a bore's diameter, the 830 Series' two-point contact system permits the measurement of out-of-round conditions. You will measure bores more precisely and with higher accuracies.

830-1 Special design segment

290 SERIES PRECISION MEASUREMENT PITCH DIAMETER OF GEARS & SPLINES

Maximum Measuring Accuracy

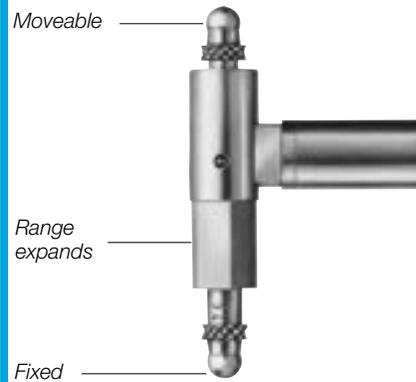

Linear $\leq \pm 0.000040''$ (± 0.001 mm)
 Repeatability $\leq 0.000020''$ (< 0.0005 mm)
 Gage R & R $\leq 10\%$ measuring
 close tolerance parts.

Notable Features

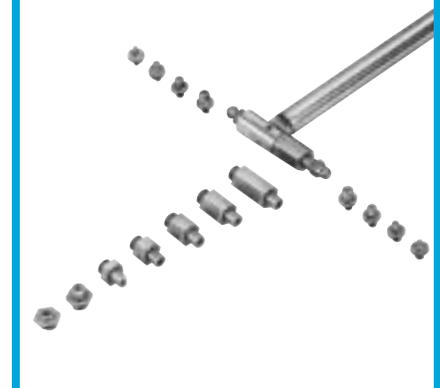

- Accuracy and large range.
- Select any carbide ball size. Many standard and custom balls in stock.
- Carbide ball contacts thread on measuring head.
- Customized standards. Contact Dyer office.

Automotive Application

Gear pitch diameter of **transmission and drive shaft** components.

Chart B. 290 Series Threaded Carbide Ball Contacts*

Order No. (Set)	For Gage Model	Thread Size
290-105**	290-005	M 1.6
290-110	290-010	M 1.6
290-115	290-015	M 2.5
290-120	290-020	M 4
290-130	290-030	M 4

* You must specify carbide ball size when ordering.

** Small ranges require fixed contact points for each measurement size.

Gage can either measure between balls or major diameter of splines.

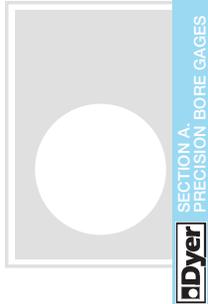

How to order

1. Select basic gage with measuring range you require. (See chart A)
2. Select a set of carbide ball threaded contact points. (See chart B). You must specify carbide ball size when ordering.
3. Select indicator, mechanical or electronic. See Section E.

MEASURE SMALL HOLES

BORE GAGES FROM DIAMETER 0.0185"

Maximum Measuring Accuracy

Linear $\pm 0.000040"$ (0.001 mm)

Repeatability $\pm 0.000040"$ (0.001 mm)

*50% better accuracy than shown can be obtained by using Bench Stand

Fast, Dependable Gaging

Available in:

- Standard Sets
- Add-On Components Parts
- Non-Standard Lengths and Ranges.

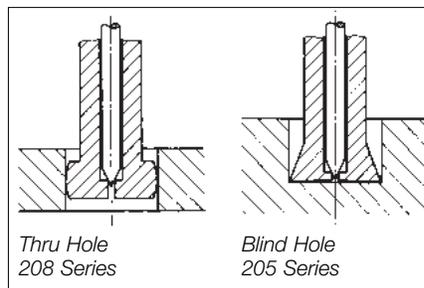

Notable Features

- Ease of use.
- Push-button retractor holder reduces gage wear when entering and leaving bore.
- Bench Stand improves accuracy by 50% and permits electronic indicator. This is a non-tipping measurement.
- Spring-loaded contact points locate in the bore radius.
- Hard chrome contacts RC65-68 standard or carbide-tipped contacts optional.
- Precision measurements are obtained by the movement of a lapped precision needle contact extender that transfers the measurement directly to the indicator.
- Gage must be tipped through the part to attain measurement.

Split Ball Probe Types Available

208 SERIES INDIVIDUAL THRU BORE MEASURING PROBE COMPONENTS

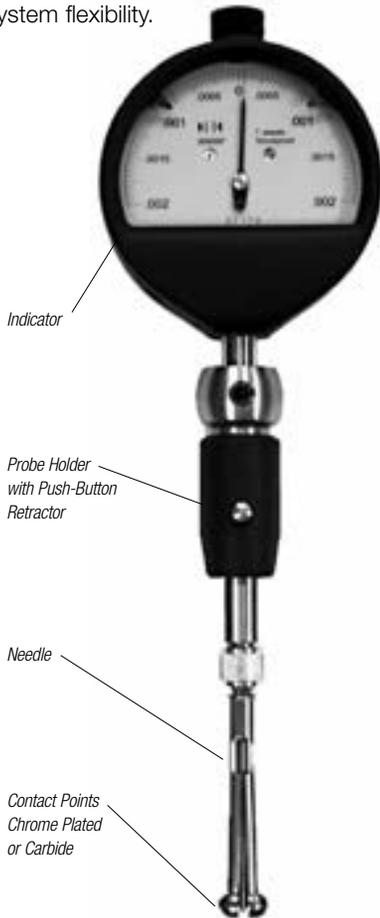

Maximum Measuring Accuracy

Linear $\pm 0.000040''$ (0.001 mm)
Repeatability $\pm 0.000040''$ (0.001 mm)

*50% better accuracy than shown can be obtained by using Bench Stand

Notable Features

- Push button holder reduces hole entrance and exit wear.
- Accurate in very small bores.
- System flexibility.

Order the following:

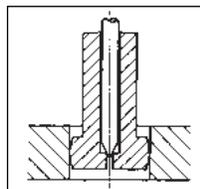

1. Probe(s) required for range.
2. Needle(s) required for range.
3. Instrument holder(s)—model depends on probe(s) ordered.
4. Indicator. See Section E for complete list and specifications.
5. Wooden box (optional).
6. Ring gage(s)
7. Accessories.

Measuring Probe Holder

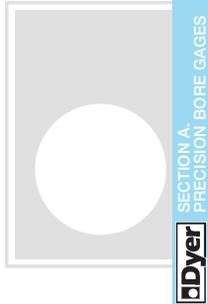

Description	Order No.
Measuring Probe Holder with push-button retractor for (recommended for smaller sizes)	209-020
Standard Measuring Probe Holder without push button for 0.0374"-0.8110" (0.95-20.6 mm)	209-030

Custom Measuring Probes

We will make in-between ranges and longer reach (deeper) measuring probes. Contact Dyer with your special applications.

200 SERIES SMALL HOLE BORE GAGE SETS

Maximum Measuring Accuracy

Linear $\pm 0.000040''$ (0.001 mm)
 Repeatability $\pm 0.000040''$ (0.001 mm)

*50% better accuracy than shown can be obtained by using Bench Stand

We offer choices when ordering 200 Series sets

Sets are available with or without push-button holder. The push-button holder extends life of the measuring probe. It retracts the outward pressure of the contact points, limiting friction, allowing the entering and exiting of the bore to be smooth and effortless. These gages are operator-friendly, and easy to use.

Special Sets

We offer sets with in-between ranges and longer (deeper reaching probes). Contact Dyer with your special needs.

Select a Standard Set

When ordering choose between sets with or without ring gages, push-button holder, chrome or carbide. Dial indicator, see Section E, are optional. Just select the model numbers you want and place the order along with the set.

1. Select the set style: thru or blind; with or without ring.
2. Indicator.

200-140 Complete set with indicator. Indicator not included with set. Order indicator separately.

Measuring Probe Holder

Description	Order No.
Measuring Probe Holder with push-button retractor for (recommended for smaller sizes)	209-020
Standard Measuring Probe Holder without push button for 0.0374"-0.8110" (0.95-20.6 mm)	209-030

Custom Measuring Probes

We will make in-between ranges and longer reach (deeper) measuring probes. Contact Dyer with your special applications.

Model 201-004 (Larger)

Notable Features

- 50% more accuracy.
- Easy to use bore gaging.
- 200 Series is non-tipping, hands-off gaging. No operator error.
- Table Ø is 4.72" (120 mm)
- Built-in adjustable depth stop controls depth of measurement in the bore.
- Protects contact points.
- Adjusts quickly, versatile applications.
- The lever moves entire gage into part.

Model 201-004 Bench Stand

This bench stand has adjustable height up to 9.84" (250 mm) and a stroke/lift 3.54" (90 mm).

Model 201-000 (Smaller)

Notable Features

- 50% more accuracy.
- Easy to use bore gaging.
- 200 Series is non-tipping, hands-off gaging. No operator error.
- Table Ø is 3.15" (80 mm)
- Built-in adjustable depth stop controls depth of measurement in the bore.
- Protects contact points.
- Adjusts quickly, versatile applications.
- The table base itself is raised by the lever.

Model 201-000 Bench Stand

This bench stand has adjustable height up to 5.118" (130 mm) and a stroke/lift 1.57" (40 mm).

Specials

Dyer can customize a bench stand to meet your needs. We provide part holding fixtures, special probes, base plates, stroke lift, etc. Contact our application engineering with your needs.

209-040 Floating Probe Holder

Eliminates radial plane errors when measuring small parts. Permits hands-off gaging.

201-020 90° Angle piece for hard-to-reach bores

Specifications: 90° angle piece that easily attaches to the 200 Series measuring probe and handles

271 SERIES BLIND HOLES, STEPPED & SHALLOW BORES

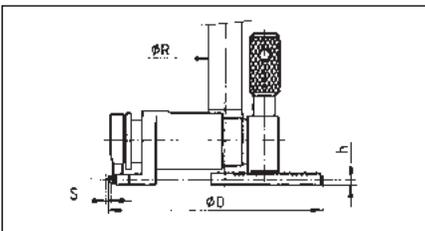

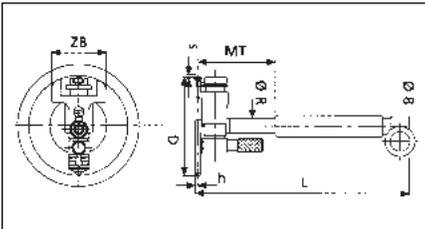

Maximum Measuring Accuracy

Linear $\leq \pm 0.000050"$ (0.0013 mm)
 Repeatability $\leq 0.000040"$ (0.001 mm)
 Gage R & R $\leq 10\%$ measuring high tolerance bores

Notable Features

Accuracy, short measuring height, sliding fixed contact to change the range, gage sets

- Measure deviations in form.
- Gage rests flat on bottom blind hole, no tipping.
- Many options, ruby contacts, special base, larger ranges; contact us with your application.
- Carbide ball contacts standard, ruby optional.
- Specials for 90° bores.
- Adjustable slide base is ribbed to lock into position.

1. Select gage based on range and "h" dimension
2. Select indicator (dial or digital)
3. Select setting master

Basic Set: Gage (with 8 mm and 3/8" stem bushings), adjustable sliding contact with carbide ball, movable carbide contact, in box. Order indicator separately.

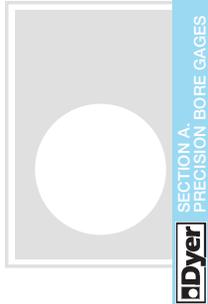

Gage will sit on a flat surface in blind hole or stepped bore, no tipping

280 SERIES PRECISE MEASUREMENTS WITH BORING BAR IN PLACE

Maximum Measuring Accuracy

Linear $\leq 0.00012"$ (0.003 mm)
 Repeatability $\leq 0.000040"$ (0.001 mm)
 Gage R & R capability $\leq 10\%$ when
 measuring high tolerance bores.

Easy to use 280 Series gages

Cut labor costs, reduce scrap. Fast accurate gaging on the machine with bore tooling in place. Spring-loaded 3-point centering and 2-point measuring. Placing the gage flat against the part allows for non-tipping, no operator influence gaging.

Notable Features

- Time saving. Use on the manufacturing machine.
- Large adjustable gage range and long contact point travel.
- Shop-rugged, fast measurements.
- Gage R & R capable, electronic indicator.
- Customize standards. Contact Dyer with your application.

The gage will set flat against the part allowing the gaging to be electronic and non-tipping with no operator influence.

280 Series Models - from left, 280-010, 280-020, 280-015
 Indicators offered separately.

220 SERIES, STANDARD HANDLE HIGHEST ACCURACY BORE GAGE 0.000040" (0.001 mm) PRECISION

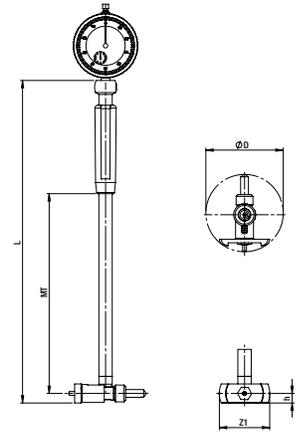

Maximum Measuring Accuracy

Linear $\leq \pm 0.000040"$ (0.001 mm)
 Repeatability $\leq \pm 0.000010"$ (0.00025 mm)
 Gage R & R capability $\leq 10\%$
 Measuring high tolerance 0.0003" (0.007 mm) bores.

Notable Features

- Highest Accuracy bore gages world wide, linear $\leq 0.000040"$ (0.001 mm) at tolerance range from "Zero" set.
- Highest repeatability world wide $\leq 0.000020"$ (0.0005 mm) unique special segment design.
- Best Gage R & R.

Model 220-035 Gage with fixed measuring pins, increment washers, in box. Order dial indicator separately.

1. Order gage model base or diameter range.
2. Order indicator.
3. Order Master.

* We recommend using only one depth extension for vertical measurements.

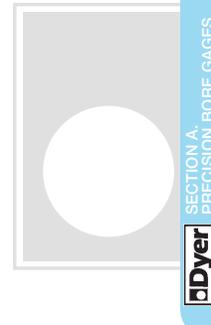

Model 224-010 Depth Extension

Special parallel version

Special right angle version

220/222/223/225 SERIES BORE GAGES HIGHEST ACCURACY, LARGE RANGE 0.180" – 31.500" (4.5 – 800 mm)

Maximum Measuring Accuracy
 Linear $\leq \pm 0.000040"$ (0.001 mm)
 Repeatability $\leq 0.000010"$ (0.00025 mm)
 Gage R & R capability $\leq 10\%$
 Measuring high tolerance 0.0003" (0.008 mm)

- Best in Gage R & R performance with an impressive $\leq 10\%$ capability, even during high tolerance applications and when measuring small and large bores.
- Gage measuring pin and interchangeable contact pins come standard carbide ball tips. Also available in ruby, chrome, teflon. Please contact Dyer Applications engineers with your specific requirements.
- Gage is used as a comparative instrument. Ideally the gage should be set with master rings but it can also be set with a universal setting device.
- Gage handle is made of invar steel with special nickel alloy that does not allow heat generated by operators hand or environment temperatures to affect the measurement result.
- Gage handle accepts 3/8" and/or 8mm diameter stem dial and digital indicators. Interchangeable brass bushings are included with each gage.
- Each gage comes with the corresponding measuring pins, spacers washers, and the necessary wrenches in a wooden box. Indicator must be ordered separately.
- Special 220 Series gages are available for measuring parallel distances, Right angle bores, hard to reach blind bores and groove diameters.

- Dyer's 220 Series is a rugged two point contact measuring instrument that can be used on the shop floor or in the inspection lab.
- These gages offer flexibility to measure various bore diameters starting from 0.18" up to 31.5" (4.5 – 800mm). Many sizes can be measured with one gage.
- Gage is a tipping style instrument. It is necessary to determine the minimum reading (reversal point) by rocking the gage while pivoting on the fixed measuring pin. When the gage axis is perfectly vertical to the bore axis, this can be attained. It is clearly found through the direction change of the pointer when using a dial indicator. A digital indicator can also be used, but we recommend one that would trap the min value.
- Gages offer the highest accuracy and repeatability due to the patented high precision deviation element that transfers movement seamlessly from one axis to another.
- The specially designed centering base allows the gage to be centered radially inside the bore. Each gage measuring range is determined by the width of the centering base.
- Gage offers three point centering while utilizing a two point measuring system. This two point system allows you to find different conditions inside the bore like ovality, taper, and out of round.
- Centering base is hardened Rc 65 and polished. It is also available with special coatings like chrome, teflon, etc.

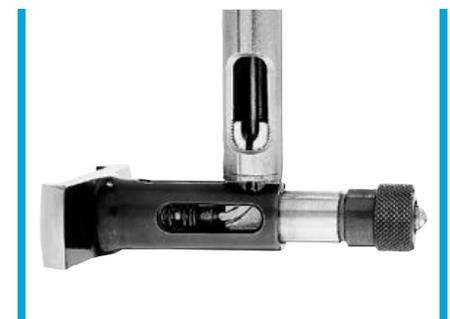

The heart of our linear and repeat accuracy is a specially designed segment

This radially-machined high-strength steel segment is accurately guided in a circular arc. It transfers the movement of the measuring contact point directly to a precision indicating unit.

This direct transfer and resulting accuracy, repeatability and reproducibility is exclusive to our bore gage design.

Special design segment for transfer of contact movement to indicator

Transfer system in measuring head

223 SERIES PRECISION BORE GAGE SET BEST VALUE, MODULAR COMPONENTS

Maximum Measuring Accuracy

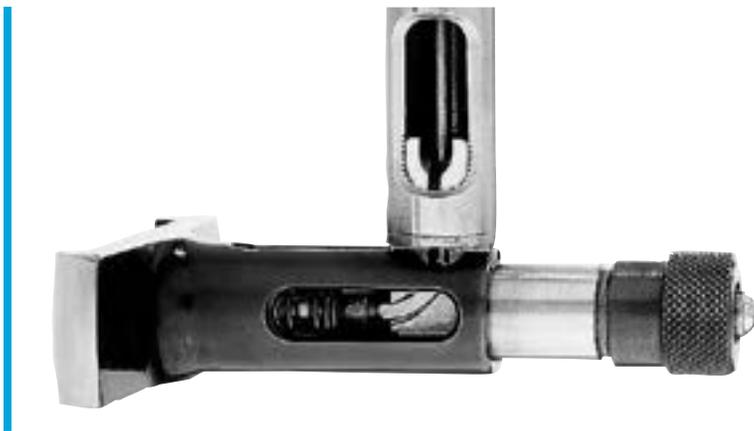

Linear $\leq \pm 0.000040$ " (0.001 mm)
 Repeatability ≤ 0.000020 " (0.0005 mm)
 Gage R & R $\leq 10\%$ measuring high tolerance bores 0.0003" (0.008 mm)

- Fast, easy to use
- Same design benefits as 220 Series
- High accuracy, large range
- Carbide contacts oversized
- Retractable centering base RW 62-65
- In wooden box.

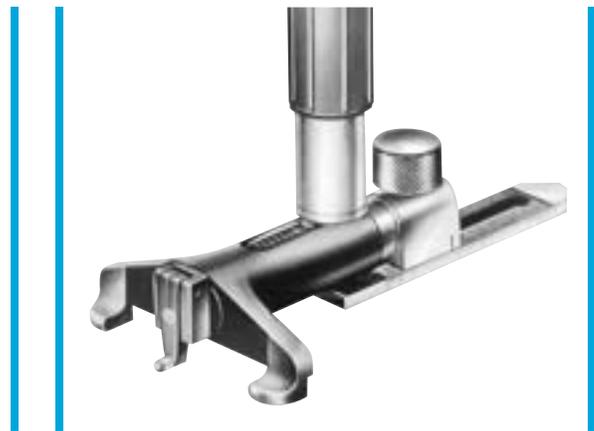

Description	Order No.
90° Angle piece—2.36" long	223-401
19" Depth Extension	223-403
30" Depth Extension	223-404

Series 223-250 Gage Set. Order indicator separately.

223-250 Thru bore measuring head with radial bent measurement transfer pin

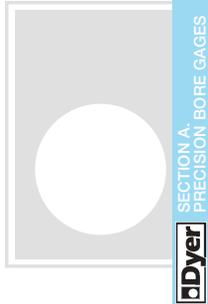

223-250 Blind hole measuring head

 Gage R & R $\leq 10\%$ measuring high tolerance bores 0.0003" (0.008 mm)

The most universal/best value tipping type bore gage in Dyer's offering.

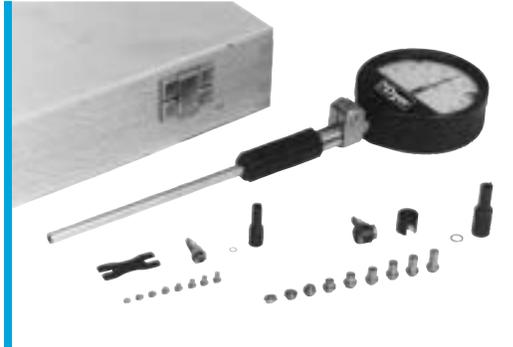

Once you use Dyer's tipping type bore gages, you will keep buying more.

Notable Features

- Precision, highest accuracy available in tipping type bore gages.
- Modular component sets means best value.
- Handles Invar steel.
- Wide spring-loaded centering bases for Gage R & R.
- In wooden box.

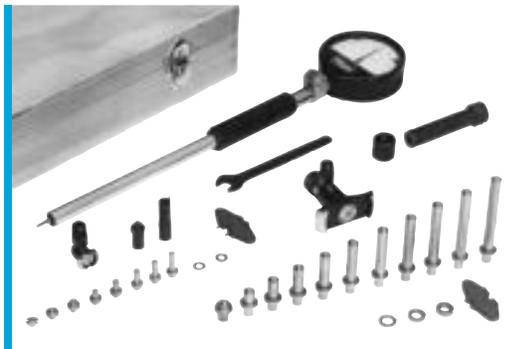

Customized Models

Contact our office with your bore application. Many options available, i.e., ruby contacts, special centering base.

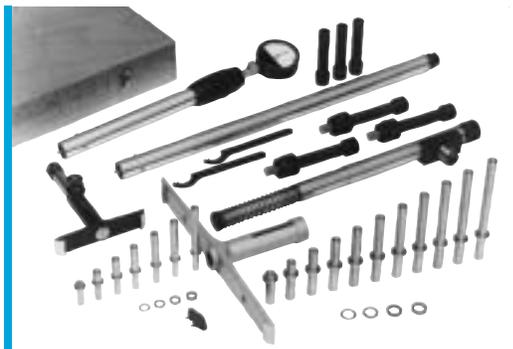

Model 223-105. Order indicator separately.

222 SERIES, SHORT HANDLE HIGHEST ACCURACY, LARGE RANGE 0.180" – 20.08" (4.5 – 510 mm)

Maximum Measuring Accuracy

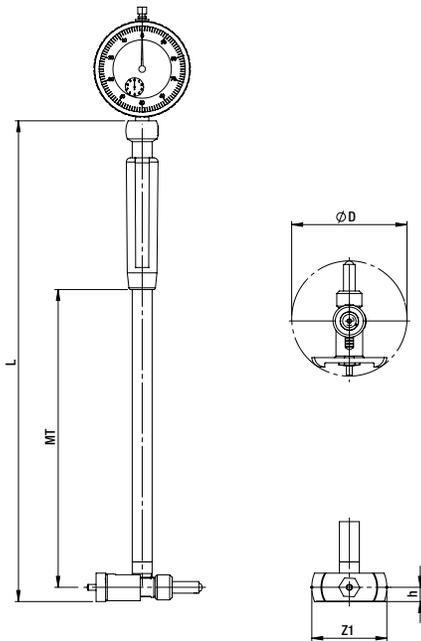

Linear $\leq \pm 0.000040"$ (0.001 mm)
 Repeatability $\leq \pm 0.000010"$ (0.00025 mm)
 Gage R & R capability $\leq 10\%$
 Measuring high tolerance 0.0003" (0.008 mm)

The world's most accurate tipping bore gages.

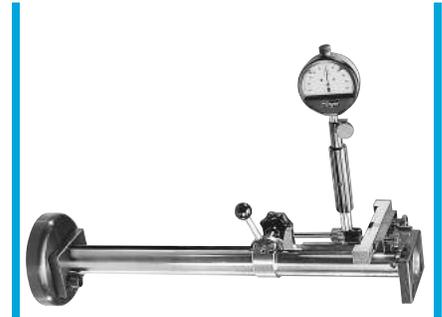

Precision bore gages for ID's from 0.18" – 31.50" (4.5 – 800 mm)

Notable Features

- Oversize, retractable, spring-loaded centering base.
- Special designed segment to transfer the measurement.
- Invar steel handle for stability.
- When tipping the gage thru the reversal point, the operator sees an exact, repeatable and clearly visible reading.
- Customized models include optional chrome centering base and ruby contacts.

222-035 Series short handle. Indicator offered separately.

222 Series short handle gage with adjustable setting master.

270 SERIES MEASURE BORES AT A 90° ANGLE JIG GRINDING

We offer all Dyer bore gage models with 90° angle capacity for awkwardly positioned bores.

Maximum Measuring Accuracy
 Linear ±0.000075" (0.0019 mm)
 Repeatability ±0.000010" (0.00025 mm)
 Gage R & R capability ≤10% when measuring high tolerance bores.

Notable Features

- Accuracy and Range.
- Non-tipping, range changeable available, see 830 Series, page A.32.
- Ruby contact optional.
- Customized specials available. Contact Dyer with your application.
- Component sets available.

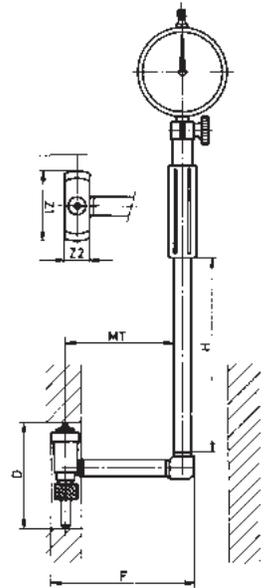

Model 270-245

Jig grinding/bore measuring application

* Order indicator separately. See Section E for complete list and specifications.

**Available in other lengths. Contact Dyer with your requirements.

225 SERIES DEEP REACH, LONG HANDLE PRECISION BORE GAGES

Maximum Measuring Accuracy

Linear $\pm 0.000040''$ (0.001 mm)
 Repeatability $\pm 0.000010''$ (0.00025 mm)
 Gage R & R <10% measuring high tolerance bores

MEASURE I.D.'S FROM 0.18" – 31.5" (4.5 mm – 800.00 mm), GAGES HAVE LARGE SELF-CENTERING BASE

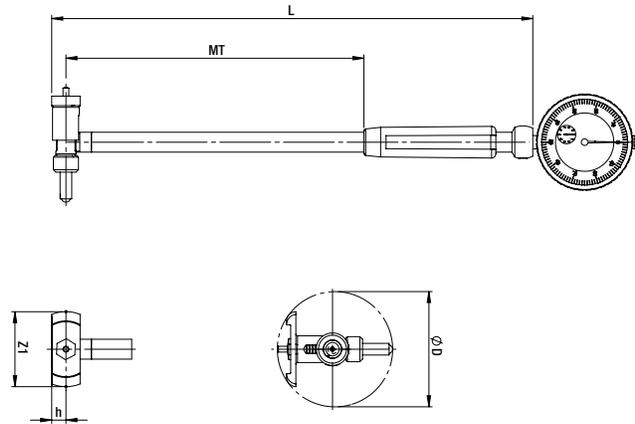

- Single-unit shaft lengths for the highest degree of measuring accuracy.
- Inch/Metric. Convert by changing dial indicator.
- In-between and longer sizes quoted on request.
- Large chrome plated self-centering base Rc 65, carbide ball contact points.
- Sealed construction, for use under dirty and oily conditions.

Model 225-035 Bore gage shown with optional indicator. Indicator offered separately.

226 SERIES CARBON FIBER DEEP REACH, LONG HANDLE PRECISION BORE GAGES

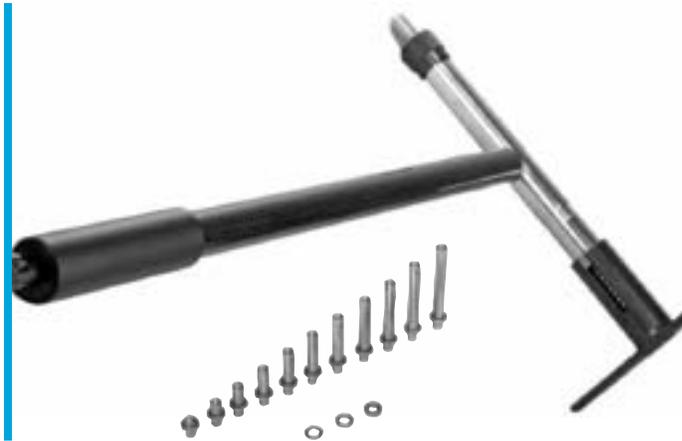

Maximum Measuring Accuracy

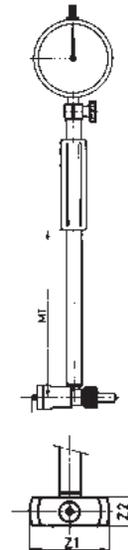

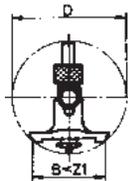

Linear $\pm 0.000040''$ (0.001 mm)
 Repeatability $\pm 0.000010''$ (0.00025 mm)
 Gage R & R capability <10% measuring high tolerance bores.

MEASURE I.D.'S FROM 1.97" – 31.5" (50 mm – 800.00 mm)

- Measuring head is accompanied by 24mm \varnothing carbon fiber interchangeable extensions to reach desired measuring depth.
- 75% less weight than 225 Model while still maintaining rigidity.
- Lighter gage with extensions translates to smaller storage box, which makes it easier to ship and to store.
- Gages have large chrome plates self-centering base Rc65 and carbide ball contacts.
- Inch/Metric. Convert by changing dial indicator.
- Sealed construction for use under dirty and oily conditions.
- Special ranges or longer measuring depths quoted on request.

Model 226-115. Order indicator separately.

230 SERIES SPHERICAL DIAMETERS

Maximum Measuring Accuracy

Linear $\leq \pm 0.000040''$ (0.001 mm)
 Repeatability $\leq \pm 0.000010''$ (0.00025 mm)
 Gage R & R capability $\leq 10\%$ when measuring high accuracy parts.

Notable Features

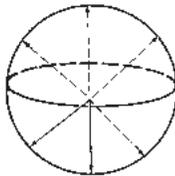

- Accuracy and range.
- 2 spring-loaded, retractable, self-centering bases align gage in part.
- Rugged 24/7 gages designed for production use.
- Customized standards. Contact Dyer with your application.

Ideal Applications

- Bearing seats of pillow block housings.
- Valve housings.
- Ball joints.
- Bearing raceways of outer rings.

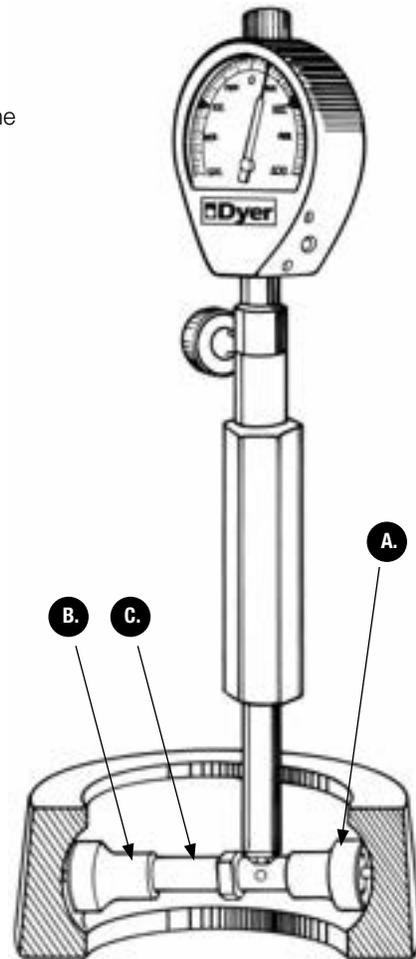

Model 230-006
 Shown with dial indicator (not included with set).

- A.** Permanently fixed, spring-loaded, centering plate with moveable contact which transmits the measurement to the indicator. Contains a spherical ring segment whose size is determined by the range.
- B.** Removable, spring-loaded centering plate with fixed contact. This base has a self-centering contact surface with a spherical radius centering base.
- C.** Gage includes standard interchangeable range extensions that allow the operator to measure any diameter within the specified gage measuring range.

Gage can also be ordered with one interchangeable range extension to measure a specific diameter.

136 SERIES

HIGH ACCURACY, LARGE DIAMETER SHALLOW BORE GAGES

Maximum Measuring Accuracy
 Linear $\pm 0.0001"$ (0.0025 mm)
 Repeatability $\leq 0.0001"$ (0.0025 mm)
 Gage R & R capability $\leq 10\%$ when measuring high tolerance bores. Contact Dyer with your application.

Direct "in-line" electronics, better large bore gaging

When gaging large bores there are many problems to overcome. Up to now, the "bar type" gage designs (i.e. shallow hole, swing gages) or I.D. mics have been used to measure large bores. Unfortunately, these designs do not meet the accuracy, repeatability and Gage R & R requirements of today's manufacturing processes.

Dyer's 136 Series will meet and exceed your large bore measuring requirements and at a reasonable cost. Also, we guarantee a $\leq 10\%$ Gage R & R on high tolerance bores.

Let's see why the 136 Series is the best choice to measure large bores:

When gaging large bores, we have to consider the following issues:

1. Easy to use and lightweight.
2. No operator influence when mastering or measuring. Automatic aligning in the bore.
3. Precise linear accuracy and repeatability.
4. 10% Gage R & R capability at high tolerances.
5. One gage for rough cut and final cut measurements. Long contact point travel.
6. Large measuring range using one gage and the ability to change size ranges easily.
7. Electronic reading.
8. Retracting contacts for recess and groove measurements.

The 136 Series gage will measure large bores "directly in-line", on the measuring axis. These gages are designed for **large bore diameters with short measuring depths.**

Notable Features

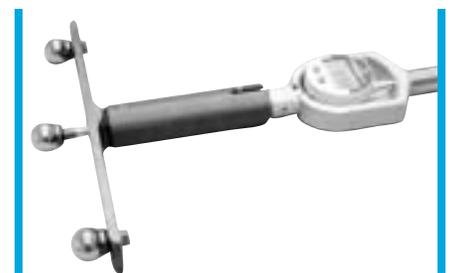

- **Easy to use and lightweight**
 "You place the gage in the bore, take your hands off and view the measurement."
- **Spring loaded self-centering base**
 "Automatically aligns the gage in the bore. Hands off gaging assures accuracy and repeatability when mastering and measuring."
- **Precise linear accuracy $\pm 0.0001"$ (0.0025 mm) and repeatability $< 0.0001"$ (0.0025 mm)**
 Gage and indicator are directly "in line" on the measuring axis, eliminating hysteresis and mechanical transfer errors." 50% higher accuracy is possible. Contact Dyer.
- **Long contact point travel 0.475" (12 mm)**
 "Accurate linear measurements are a result of the in-line indicator design." Optional contact point retracting pin for groove and recess applications. Contact Dyer.
- **Dyer guarantees a 10% Gage R & R capability on high tolerance bores.**
- **Large size range capability**
 Model 136-100 has a 9" range (11.00 - 20.00") and Model 136-200 has a 15.75" range (15.75-31.50"). Larger sizes available. Contact Dyer.
- **Length changeable Depth stops locate on the bore's face or step.**
 Gage drops into the "in-line axis" measuring position. There are no "hanging contact feet".
- **Many indicator possibilities for SPC data collection**

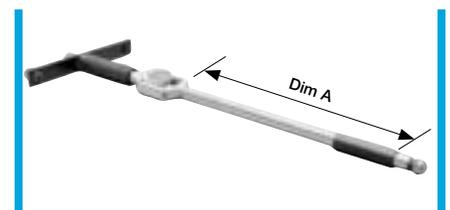

Model 136-100 with depth stops

Model 136-210 spring-loaded centering base with depth stops

Model 136-210 custom design for diameters larger than 31.00". Special contacts and centering-base designed for measuring the I.D. of large bearing races.

Model 136-210 fixed tube "Dim A" can be many lengths and interchangeable for different diameters sizes.

Models and Specifications

Range Inch (mm)	Contact Point Travel	"h" Dim.	Fixed Contacts/ Washers	Range Extensions	Depth Stop	Order No. Inch	Order No. E/Inch/Metric

¹ Larger sizes possible, contact Dyer.

PRECISION RETRACTABLE BORE & GROOVE GAGING

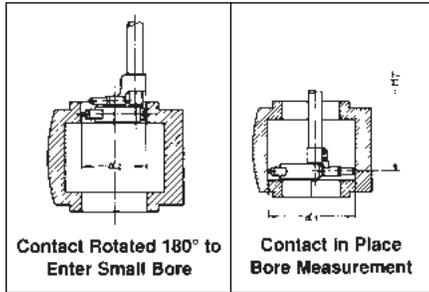

Series 261 thru 267 rotate fixed contact

Measure hard-to-reach pillow block bores, undercuts, bearing races, landing gear recesses.

How to order

1. Select gage from chart. If these size ranges do not fit your application, contact Dyer office.
2. Select dial indication.
3. Select set master.

Contact Rotated 180° to Enter Small Bore

Contact in Place Bore Measurement

Contact rotates 180°

Gage open to measure larger internal bore

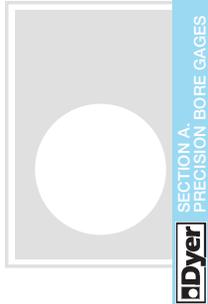

Contact point rotated 180° to enter small bore

Series 262 thru 267

RETRACTABLE BORE GAGES MEASURE PILLOW BLOCK HOUSING & OTHER HARD-TO-REACH BORES

Maximum Measuring Accuracy
 Linear $\leq \pm 0.000040"$ (0.001 mm)
 Repeatability $\leq 0.000060"$ (0.0015 mm)
 Gage R & R $\leq 10\%$ measuring high tolerance parts.

Use these gages when your measuring application requires high accuracy, repeatability and reproducibility.

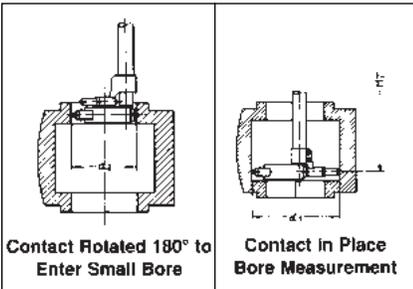

Model 264-010 with fixed contact point turned in. Contact will rotate 180° to measuring position once gage enters part.

Notable Features

- High accuracy, ease of use, fast measurements.
- Fixed contact pin rotates 180° parallel to the centering base.
- Special depths to 79" (3000 mm).
- Special depth stops.
- Customized standards, contact Dyer office.

Ideal Applications

- Aerospace application. Multiple angled-tapered, large deep bore within landing gears. Gages are retractable to enter smaller bore and open to measure larger bore. Very high accuracy bore gages, with custom long handles, to reach deep bores.
- Pillow block housings

Contact rotates 180°

DYER SPECIAL "ADDED VALUE" SERVICES CUSTOM MARKINGS & STORAGE CASE OPTIONS

MARKING INFORMATION

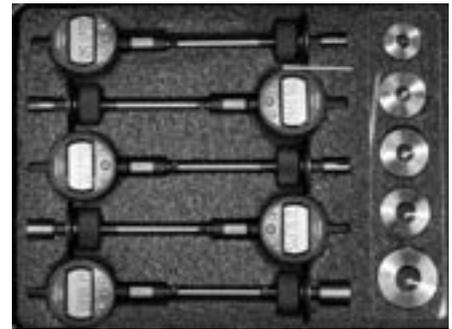

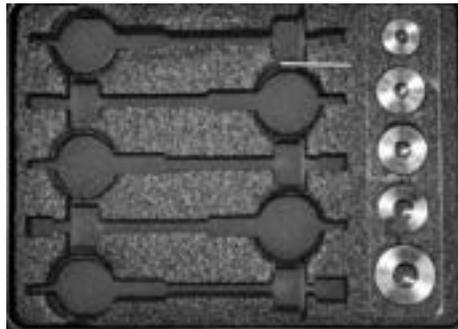

- Dyer can custom mark any information on your gage (letters, numbers, barcode, logo, etc.) A nominal fee will be applied.
- A variety of materials can be marked: tool steel, stainless steel, coated metals, anodized aluminum, plastic, acrylic, wood and even glass.
- New gages or existing gages can be marked, even other manufacturer's gages!
- Contact our Marking Specialists about your specific needs.

STORAGE CASE INFORMATION

- Dyer can create custom storage cases to fit your gages whether they are new or existing units. (Please provide drawing of existing unit you want to store)
- Single or multiple units can be stored in one case.
- We have the capability to laser cut precisely within 0.001", so any shape is possible
- Wooden and plastic cases are standard. Other styles are available upon request.
- Special acrylic pieces can be made to keep your master rings looking new. Set your gages without ever handling the masters!
- Contact our Engineering Department about your specific needs.

Dyer laser System

Standard PLASTIC Storage Case with Handles

Size L x W x D (inches)	Order No.
12" x 8" x 2"	308-010
15.5" x 11.5" x 3.5"	308-011
36" x 10" x 4"	308-015

Standard WOODEN Storage Case

Size L x W x D (inches)	Order No.
12" x 6" x 2"	308-210
17.5" x 8" x 3"	308-211
29" x 7.5" x 6.5"	308-215

Special size wooden or plastic cases available upon request.

104 SERIES DIRECT READING SPECIAL ARM DESIGNS

Maximum Measuring Accuracy

Linear Accuracy at 0.100" Travel
 $\pm 0.0005"$ (0.010 mm)
 Full range $\pm 0.001"$ (0.020 mm)
 Repeatability $\leq 0.0005"$ (0.01 mm)

Notable Features

Electronic option, quality and accuracy of gage, many different models.

- Fast, accurate, repeatable.
- Direct reading.
- Spring-loaded contact arms.
- Needle and ball contacts also available.
- Soft materials, medical field, many applications.

Special larger range 104 gage

Customized Gages from Standard Gage Models

Dyer will customize a standard "in-stock gage" to meet your part measuring needs. We can change ranges, arm sizes and lengths, add depth stops and modify contact point tips, ball sizes and types.

Special Gage Designs (No Minimum Quantities)

Dyer will make a single gage to meet your requirements. We have a large number of special designs/gage solutions in our files. Contact our application engineers and show us your application requirements.

Special Carbide Ball Contacts

The carbide ball sizes shown below are in stock for immediate delivery. We also offer different types of material, i.e., chrome, ruby, ceramic, teflon. Additional customized sizes are available. Contact us with your application requirements.

We can help you!

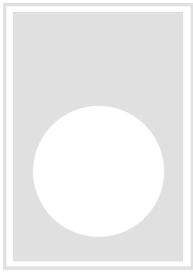

104 Series with special arm profile

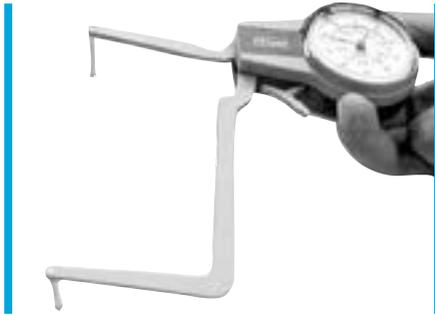

Carbide Ball Contacts

Inch	mm

0.500 = 1/2	6.0
0.625 = 5/8	7.0

104 SERIES SPECIAL DESIGNS FOR HARD-TO-REACH GROOVES

Show Dyer your application. We will help you select the right gage.

*104 Series special
Right angle contacts to measure recessed
grooves around a hub.*

*104 Series Special
Thinned tips to enter slotted special sensor
cartridge.*

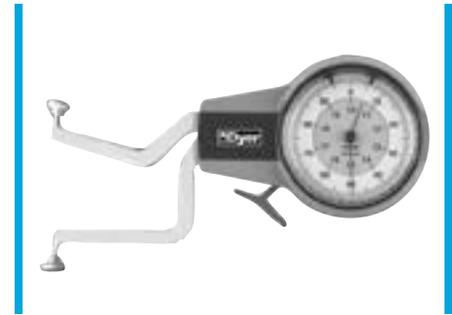

*104 Series Special
Reverse angled contact points to measure
a recessed groove in blind bore.*

*104 Series
104-102 Special
Contact arms modified to enter 0.080" tube
for 0.150" depth.*

*104 Series Special
Needle contact points to reach small
recesses.*

*104 Series Modified
Special mushroom contacts that span a gear
tooth pattern in a bore.*

*104 Series Special Arms and Contacts
Measure ID and OD groove at bottom
of a hub within a bore.*

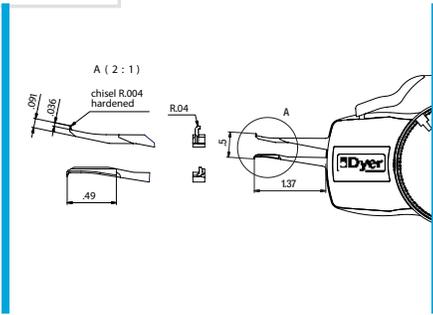

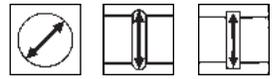

*104 Series Special
Angled recessed groove.*

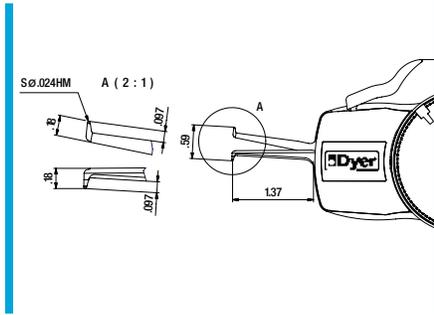

*104 Series
Special angled contacts to measure groove
undercut at bottom of a blind bore.*

Measuring Accuracy

Gages with 0.4" Travel:
Linear Accuracy $\pm 0.0004"$
Repeatability $\pm 0.0002"$

Gages with 0.8" Travel:
Linear Accuracy $\pm 0.001"$
Repeatability $\pm 0.0005"$

Notable Features

- Fast, accurate, repeatable.
- Lightweight
- SPC output for USB or Mitutoyo devices. Cables offered separately.
- Absolute and relative modes with Min, Max and Hold programs.
- Tolerance limit markers with green/red LED for visual operator judgment
- Internal memory that holds a maximum of 80 measured values.
- Programmable auto shut off for battery savings.
- IP 67. Gages are shop rugged.
- Analog segment (fan) display.
- Keypad lock.
- Wireless data option. Contact us with your requirement.

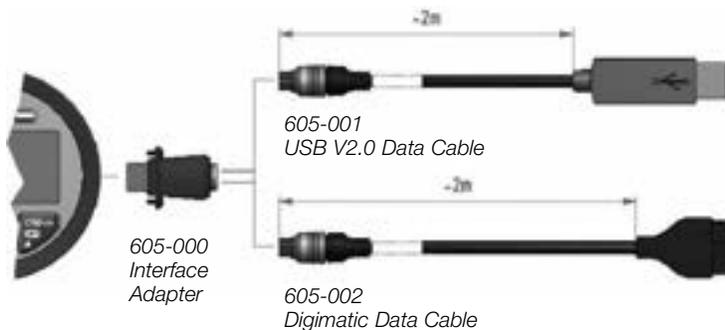

Special customized arms, ball sizes and/or ball material are also available. Dyer is dedicated to solving your special measuring applications. Contact Dyer Applications Engineering with your specific gage requirement.

651 SERIES ELECTRONIC O-RING/GROOVE GAGES FOR RECESSED BORES

Maximum Measuring Accuracy

Linear Accuracy at $\pm 0.001''$
Repeatability $\pm 0.0005''$

Notable Features

- Fast, accurate, repeatable.
- Light weight.
- SPC output for USB or Mitutoyo devices. Cables offered separately.
- Absolute and Relative modes with Min, Max and Hold programs.
- Tolerance limit markers with Green/Red LED for visual operator judgement.
- Internal memory that holds a maximum of 80 measured values.
- Programmable auto shut off for battery savings.
- IP 67. Gages are shop rugged.
- Analog segment (fan) display.
- Keypad lock.
- Wireless data option. Contact us with your requirement.

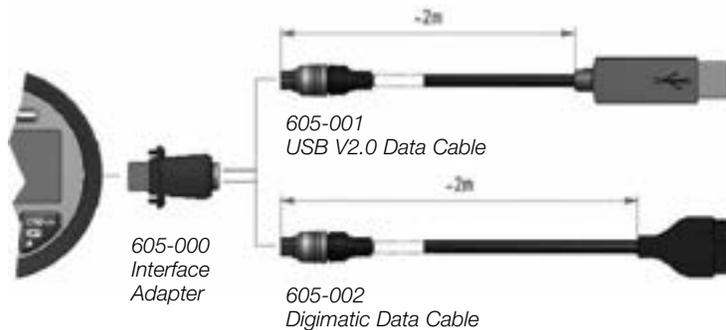

Special customized arms, ball sizes and/or ball material are also available. Dyer is dedicated to solving your special measuring applications. Contact Dyer Applications Engineering with your specific gage requirement.

101 SERIES "LONGER REACH" DIRECT READING O-RING/GROOVE GAGES

Maximum Measuring Accuracy
 101 Series with 7.0" reach
 Linear Accuracy $\pm 0.002"$ (0.050 mm)
 Repeatability $\pm 0.001"$ (0.025 mm)
 Gage R & R capable

Notable Features

- These gages are direct reading models.
- Large range and contact travel.
- Rugged, 24/7 shop use.

Special Carbide Ball Contacts

The carbide ball sizes shown below are in stock for immediate delivery. We also offer different types of material, i.e., chrome, ruby, ceramic, teflon. Additional customized sizes are available. Contact us with your application requirements.

101 SERIES DIRECT READING SPECIAL ARM DESIGNS

Maximum Measuring Accuracy
 Linear Accuracy at 0.100" Travel
 $\pm 0.0005"$ (0.010 mm)
 Full Range $\pm 0.001"$ (0.020 mm)
 Repeatability $\leq 0.0005"$ (0.01 mm)

Notable Features

- Fast, accurate, repeatable
- Direct reading
- Spring-loaded contact arms
- Needle and ball contacts also available
- Soft materials, medical field, many applications

Modified 101 Series gage with a lower chisel contact and special range.

Customized Gages from Standard Gage Models

Dyer will customize a standard "in-stock gage" to meet your part measuring needs. We can change ranges, arm sizes and lengths, add depth stops and modify contact point tips, ball sizes and types.

Special Gage Designs (No Minimum Quantities)

Dyer will make a single gage to meet your requirements. We have a large number of special designs/gage solutions in our files. Contact our application engineers and show us your application requirements.

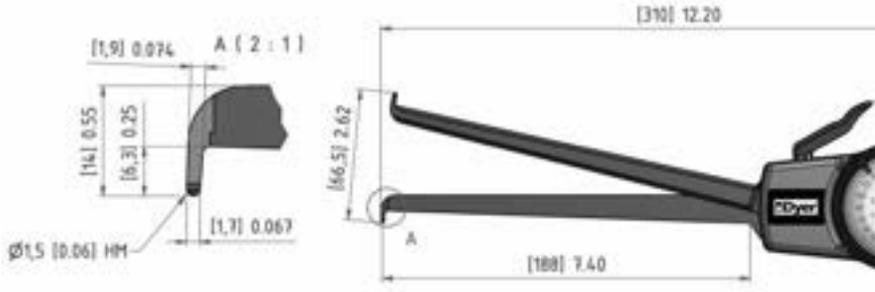

We can help you!

Special Carbide Ball Contacts

The carbide ball sizes shown below are in stock for immediate delivery. We also offer different types of material, i.e., chrome, ruby, ceramic, teflon. Additional customized sizes are available. Contact us with your application requirements.

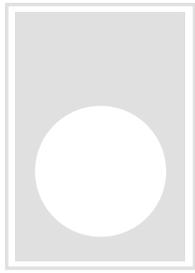

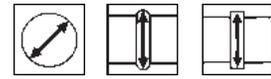

Carbide Ball Contacts

Inch	mm
0.031 = 1/32	0.5
0.063 = 1/16	1.0
0.078 = 5/64	1.5
0.098 = 3/32	2.0
0.125 = 1/8	2.5
0.156 = 5/32	3.0
0.188 = 3/16	3.5
0.250 = 1/4	4.5
0.312 = 5/16	5.0
0.438 = 7/16	5.5
0.500 = 1/2	6.0
0.625 = 5/8	7.0

101-105 Special. Teflon ball contacts to measure a mirror surface. Non-marking contacts.

101 SERIES "LONGER REACH" DIRECT READING O-RING/GROOVE GAGES

Modified 101 Series with special measuring range of 0.2" to 2.2" to enter small deep grooves.

Special 101 Series with stepped arms and reduced tips to measure a hard-to-reach feature.

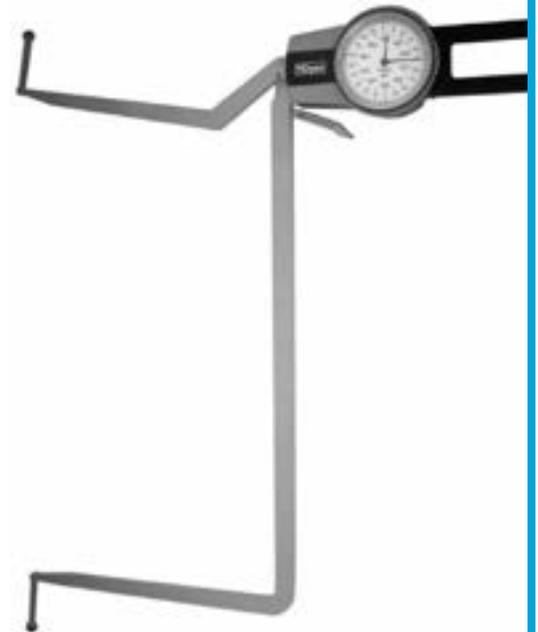

Modified 101 Series with custom 1/2 ball contacts to measure internal spline feature.

Modified 101 Series with extended thin contacts to measure deep grooves.

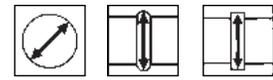

Modified 101 Series with angled contacts.

Modified 101 Series with special larger measuring range.

101 SERIES "LONGER REACH" O-RING/GROOVE GAGES

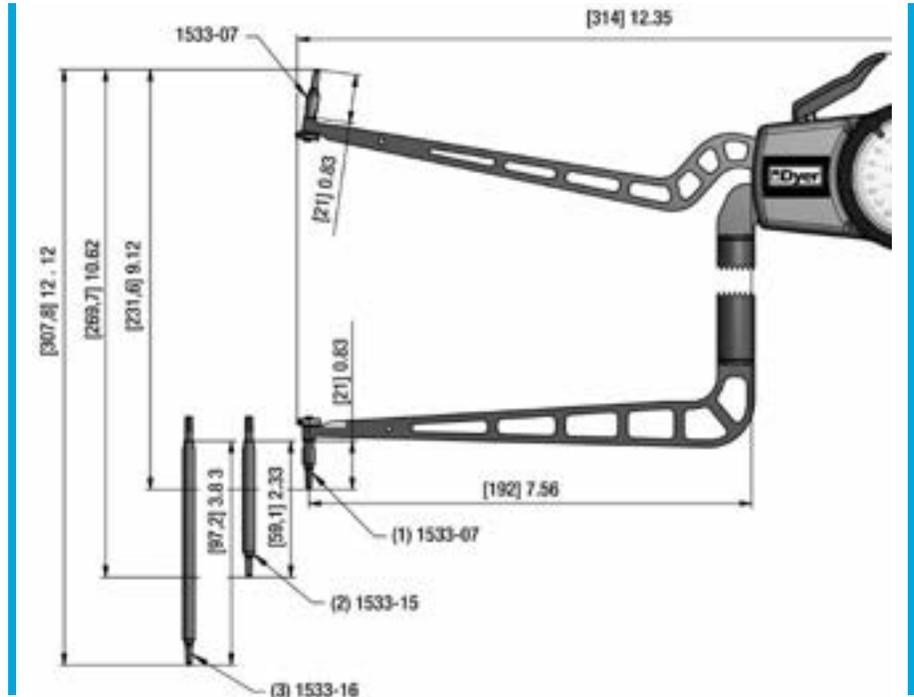

Maximum Measuring Accuracy

101 Series with 6.9" reach
 Linear ± 0.002 " (0.050 mm)
 Repeatability ± 0.001 " (0.025 mm)
 Gage R & R capable

Notable Features

- These gages are comparative reading models (101-116 and 101-117, 101-218 and 101-219).
- Large range and contact travel.
- Rugged, 24/7 shop use.

Pistol Grip Handle Information				
Pistol Grip handle with pull-back trigger is used for all 210 and 211 Series Measuring Probes. This handle will accept both 3/8" and 8 mm diameter stem indicators.				210-001

Depth Extensions for 0.775" ranges and up

Description	Order No.
3.93"/100 mm Depth Extension	210-079
9.84"/250 mm Depth Extension	210-080
14.00"/356 mm Depth Extension	210-085
Depth Stop	210-090

210-211 SERIES PRECISION ID GROOVE GAGES FOR SMALL DEEP GROOVE MEASUREMENTS

Maximum Measuring Accuracy
 Linear $\leq \pm 0.00015"$ (0.004 mm)
 Repeatability $\leq \pm 0.0002"$ (0.005 mm)
 Gage R & R capable in high tolerance grooves

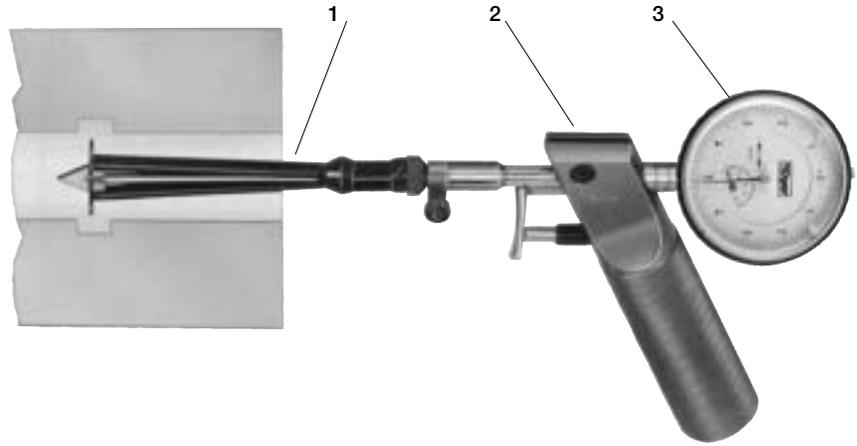

Notable Features

- High accuracy, easy to use, fast measurements.
- Special contact points, in between ranges, longer retraction. Contact Dyer with your part application.
- Longer length probes available in special dies.

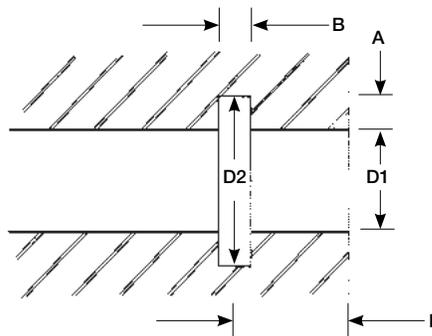

How to order

1. Select probe with the range you require.
2. Select pistol grip handle. All measuring probes 210 and 211 fit this basic holder 210-001.
3. Select indicator.
4. Optional – Ring set master, depth extension, depth stop.

210-001 handle with 210-010 probe. Indicator ordered separately.

Indicators optional. See Section E for complete list and specifications.

131 SERIES ID-OD SHALLOW DIAMETER GAGES

Notable Features

- Large range, easy to use.
- Adjustable contacts with 1.00" (25.4 mm) retraction, gaging depths up to 2.5" (64 mm).
- Hardened and precision ground gage resting surface.
- Fine adjustment setting for fast setting.
- Fast change over ID to OD.
- Contact points can be rotated to extend useful gaging life.
- Optional bench stand available.
- Overall length with indicator 12.75" (324 mm)

How to Order

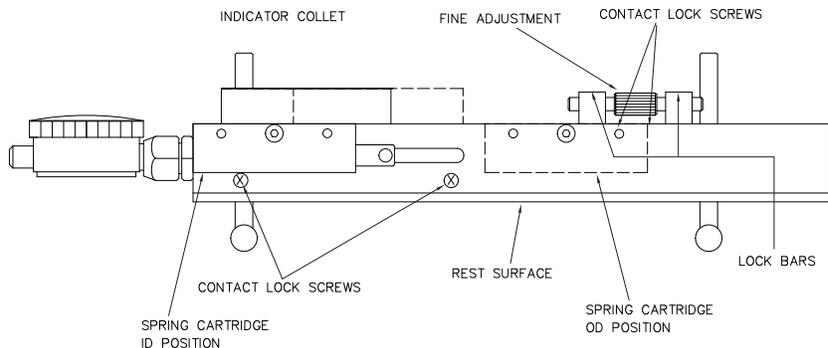

1. Select gage model
2. Select contact points

131-701 Gage with optional 131-900 bench stand

132 SERIES ID GROOVE GAGES BIG RANGES

132 Series, Big Range, ID groove gages

Notable Features

- Large range 0.290"–7.900" (7.4–200 mm).
- Retractable upper arm and fixed lower arm. Upper arm remains parallel to lower arm during measuring process.
- Gage set to zero with a master.
- Gage arms (ordered separately) available in many sizes.
- Full 1" retraction for deep grooves

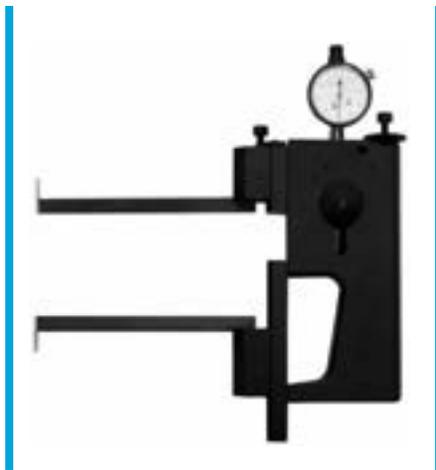

How to order

1. Select a basic gage model.
2. Select an arm set.

747 SERIES ID-OD MEASURING TABLES

Model 747-001 2-Point Measuring

The Highest Accuracy and Repeatability

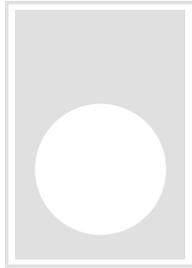

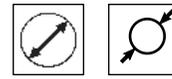

Dyer's 747 Series is a high-precision measuring table based on a precise linear movement of the moveable contact point. A single unit offers a choice of 2-point measuring or 3-point measuring. The gage can be set up as a "hands off" gage, where the operator places the part on the table and releases the measuring contact. There is no operator error and the system will provide Gage R & R capable measurements. A wide range of gaging options makes this gage Dyer's most flexible in many measuring applications, such as thin walls, plastics and hard to reach locations on metal parts.

747 Series ID-OD Measuring Tables Design Benefits

① Gage top plate is hardened and ground tool steel; comes standard with a thin dense chromium (TDC) satin finish coating (RC70-74); and tapped Mb threaded holes for attaching different contact accessories or fixture mountings. Key properties of thin dense chromium (TDC) include low coefficient of friction; greater lubricity and non-balling properties; high chemical and corrosion resistance, high surface hardness (RC70-72); high abrasion resistance and longer wear life. These extra-ordinary properties translate to distinct performance advantages over ordinary steel top plates.

- ② Rigid steel base
- ③ Retracting lever for large range 0.800" (20 mm)
- ④ Contact adjustment screws can limit retracting contact point travel
- ⑤ Fine adjustment of measuring pressure and direction (ID or OD) is accomplished by rotating spring-loaded disc located on opposite side of base across from retracting lever #3.
- ⑥ Fixed contact point arm adjust easily for different contact point heights.
- ⑦ Moveable spring loaded measuring contact point arm adjusts easily for different contact point heights.
- ⑧ 3/8" standard or 8 mm optional collect for holding indicating unit.

747 SERIES ID-OD MEASURING TABLES

Maximum Measuring Accuracy

Linear, Range 0.0"–0.080" (0.0–2 mm)
≤ 0.000050" (0.0013 mm)

Range 0.0"–0.200" (0–5 mm)
± 0.000040" (0.001 mm)

Range 0.0"–0.400" (0–10 mm)
± 0.0001" (0.0025 mm)

Range 0.0"–0.600" (0–15 mm)
± 0.0002" (0.005 mm)

Repeatability ≤ 0.000050" (0.0013 mm)

Gage R & R capable in high tolerance applications

These gages are true value leaders and gage most measuring applications.

Notable Features

- Armoloy coating on all tables is standard.
- ID-OD applications.
- High accuracy and set-up flexibility.
- Fast, accurate measurements.
- Gage R & R capable.
- Large range.
- Adjustable contact pressure.
- Contact point flexibility, use all types of indicators.
- Shop-rugged, 24/7.

How to place an order

- a. Select the table model you require.
- b. Choose electronic or mechanical indication.
- c. If you need additional contacts, ring masters or part fixture design setup, contact Dyer Gage.

Special Part Fixturing

We can recommend part fixturing and setup. Contact Dyer Application Engineering with your requirements.

MANY MEASURING POSSIBILITIES WHEN YOU SELECT DYER'S 747 SERIES

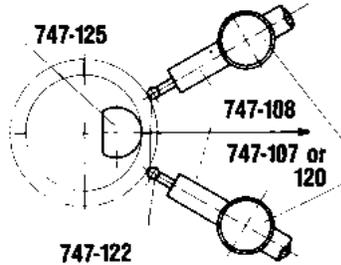

Show Dyer your application. We will help you select the right components.

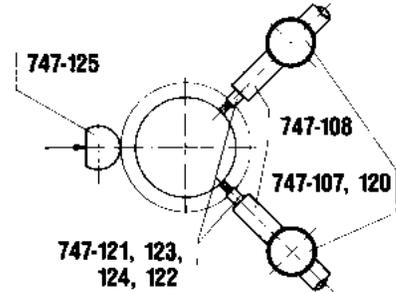

Best Value

The 747 Series is surprisingly affordable, and because of its capability, will save you from having to buy many different types of gages.

With over 2500 installations, the 747 Series ID-OD gaging station has proven its value time and time again. This measuring station is designed for maximum versatility, and the measurement of parts where inspection accuracy and tolerances are critical. Also, contact pressure is easily adjusted by operator. This gage is excellent for inspecting thin-wall parts or less rigid plastic parts.

134 SERIES ID-OD SHALLOW DIAMETER "BAR" GAGES

Large Sizes

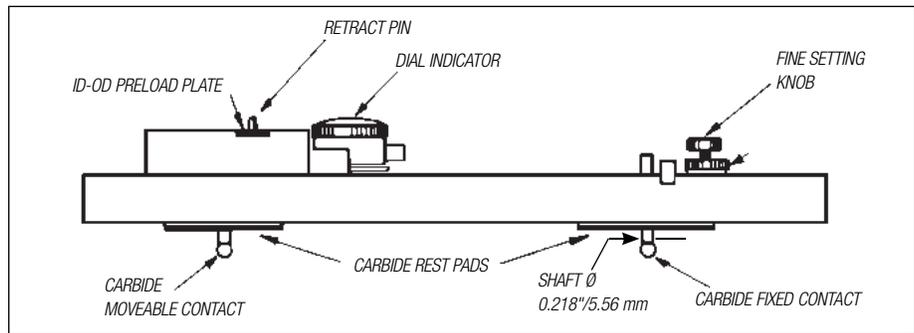

Fast, easy to use, 2-point measurement, ideal for shallow ID's and OD's, center distances of holes, PD of gears and other part dimensions

Notable Features

- Reed transfer movement offers precise frictionless repeatability.
- Quick, easy 2-point comparison measurement.
- Light weight alloy steel air frame tubing with carbide gage surface.
- 0–1" adjustable gaging depth, contacts rotate, greatly extending useful gaging life.
- Fast acting fine adjustment setting.
- Instant change-over in seconds from ID to OD.
- Sizes larger than 60" available. Contact Dyer application engineering.
- Special contacts.
- Optional wooden storage case.

135 SERIES ID-OD SHALLOW DIAMETER BORE & GROOVE GAGES

Ideal for Groove Measurements

Gage inside and outside diameters of grooves, bores, step Ø's PD's gears.

Notable Features

- Light weight, easy to use, alloy steel, air frame tubing used for gage body.
- Precise, repeatable frictionless linear ball bushing movement.
- 0.75"-1.00" (19 mm-25.4 mm) contact point retraction. Good for groove measurements.
- Adjustable gage depth up to 3.00" (76.2 mm).
- Positive reversal from ID to OD in seconds.
- Fine adjustment setting for fast setting.
- Contacts rotate providing for extended gage life.
- Sizes longer than 60" and special contacts, contact Dyer application engineering.

313 SERIES DIRECT READING SPECIAL ARM DESIGNS

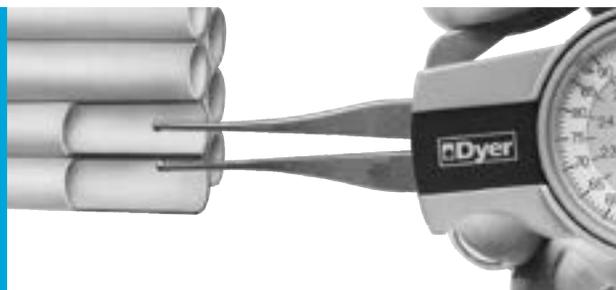

Maximum Measuring Accuracy

313 Series with 2.4"/61 mm reach
Linear $\leq \pm 0.0005"/0.01$ mm
Repeatability $\leq 0.0005"/0.01$ mm

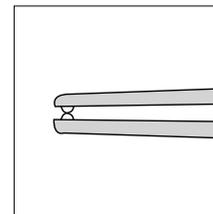

Notable Features

- Fast, accurate, repeatable.
- Direct reading.
- Spring-loaded contact arms.
- Needle and ball contacts also available.
- Soft materials, medical field, many applications.

Model 313-360 Special

The 313-360 has special straight arms that measures thickness of parallel surfaces or web designs. Arms are set parallel to your part application specifications. Contact Dyer with your requirements.

C Ball contact
upper and lower

Customized Gages from Standard Gage Models

Dyer will customize a standard "in-stock gage" to meet your part measuring needs. We can change ranges, arm sizes and lengths, add depth stops and modify contact point tips, ball sizes and types.

Special Gage Designs (No Minimum Quantities)

Dyer will make a single gage to meet your requirements. We have a large number of special designs/gage solutions in our files. Contact our applications engineers and show us your application requirements. *We can help you!*

Special Carbide Ball Contacts

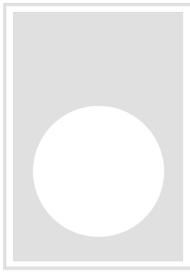

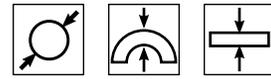

The carbide ball sizes shown at right are in stock for immediate delivery. We also offer different types of material, i.e., chrome, ruby, ceramic, teflon. Additional customized sizes are available. Contact us with your application requirements.

Inch	mm
0.031 = 1/32	0.5
0.063 = 1/16	1.0
0.078 = 5/64	1.5
0.098 = 3/32	2.0
0.125 = 1/8	2.5
0.156 = 5/32	3.0
0.188 = 3/16	3.5
0.250 = 1/4	4.5
0.312 = 5/16	5.0
0.438 = 7/16	5.5
0.500 = 1/2	6.0
0.625 = 5/8	7.0

This special 313 model has thinned arms that can fit into hard-to-reach areas on a part.

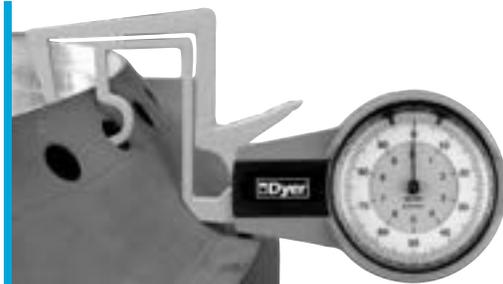

APPLICATION IDEAS CUSTOM HAND GAGES FAST SERVICE ON SPECIAL DESIGNS

SHOW DYER YOUR APPLICATION. WE WILL HELP YOU SELECT THE RIGHT GAGE.

*313 Series Special
Gage in position to measure 2 offset locations within a part.
One gage saves cost and time.*

*313 Series Special with modified arms and contacts measure
(2) two-step thickness that are offset at hard to reach locations
on an aerospace part.*

*Special lower arm can be modified to enter holes
as small as 0.040".*

*313 Special
Model 313-405 modified to measure wall thickness of nozzle
partition for turbine engines.*

*313 Series
Special lower arm.*

*313 Series Special
Arm design to customer's drawing.*

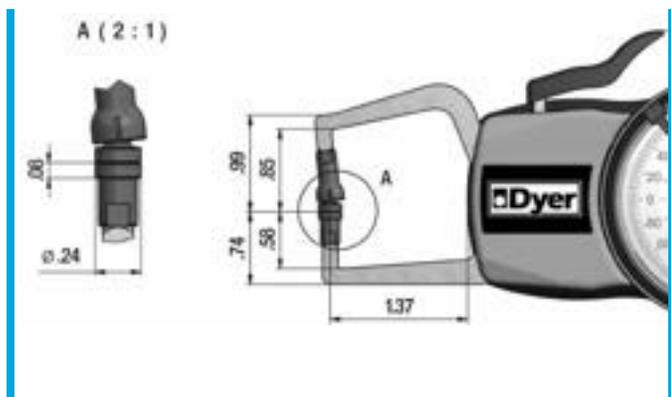

*313 Series Special
Modified lower arm that will clear an obstruction on the part.*

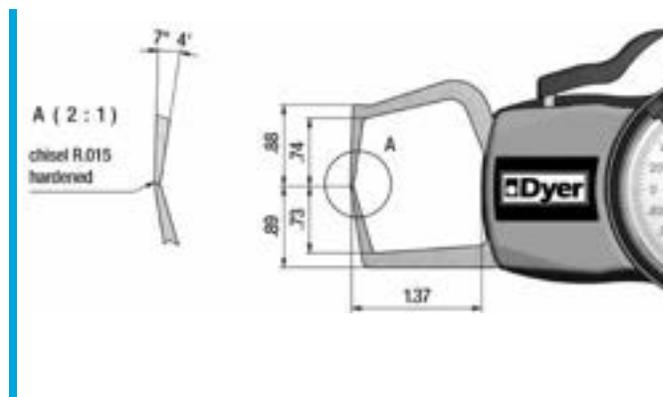

*313 Series Special
Special lower arms with adjustable depth stop.*

301-505

301-506

301 SERIES SHORT REACH DIRECT READING MIN-WALL/THICKNESS GAGES

Maximum Measuring Accuracy

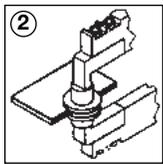

301 Series with 1.37" reach
Linear Accuracy at 0.0004"
Repeatability ± 0.0002 "

Five different contact tip sets available as standard. Fast service on custom arms and contact tips. Contact Dyer office.

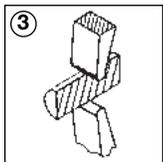

Notable Features

- Operator friendly, no operator error.
- Fast, accurate, repeatable and shop-rugged.
- Gage will reach over flanges and measure hard-to-reach thicknesses on castings and aircraft parts.
- 1-5 day service on custom arms and contacts.
- Easy to read dial.

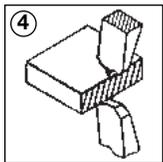

We will customize special arms, contact and carbide ball sizes to meet your applications needs.

SHOW DYER YOUR APPLICATION. WE WILL HELP YOU SELECT THE RIGHT GAGE.

Customized Gages from Standard Gage Models

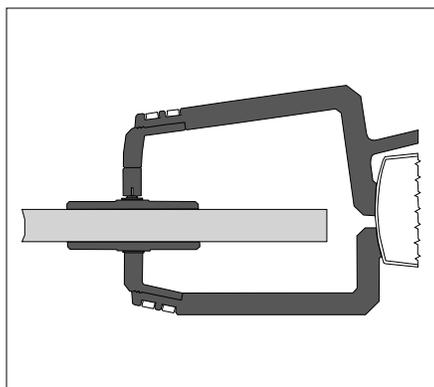

Dyer will customize a standard "in-stock gage" to meet your part measuring needs. We can change ranges, arm sizes and lengths, add depth stops and modify contact point tips, ball sizes and types.

Standard "Off-The-Shelf" Gages

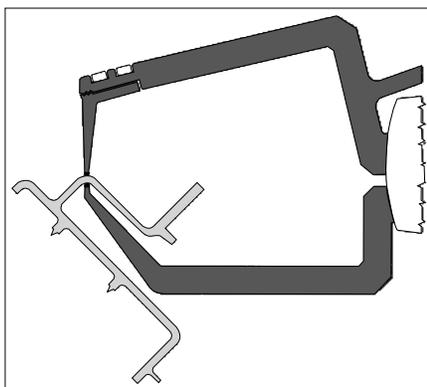

Many Dyer standard models will work in your measuring applications. Contact our gage application engineers and we'll help you choose the right gage.

Special Gage Designs (No Minimum Quantities)

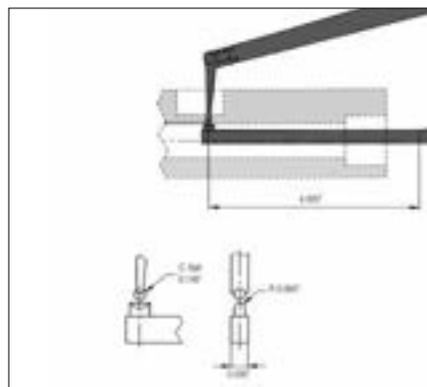

Dyer will make a single gage to meet your requirements. We have a large number of special designs/gage solutions in our files. Contact our application engineers and show us your application requirements. *We can help you!*

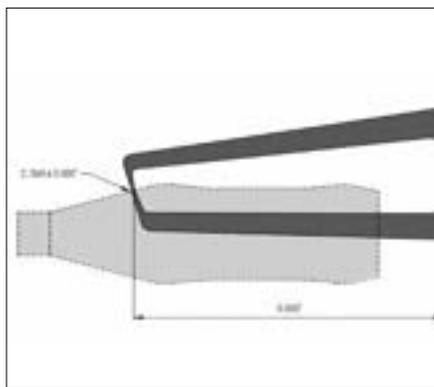

Repeatable foam thickness measurements

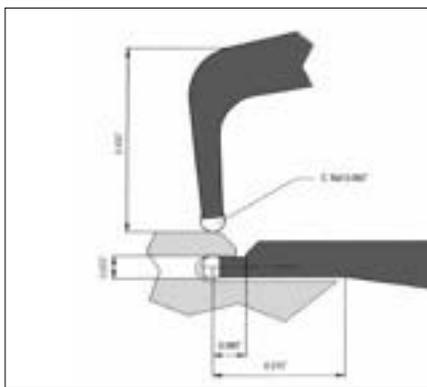

Hard-to-reach wall thickness

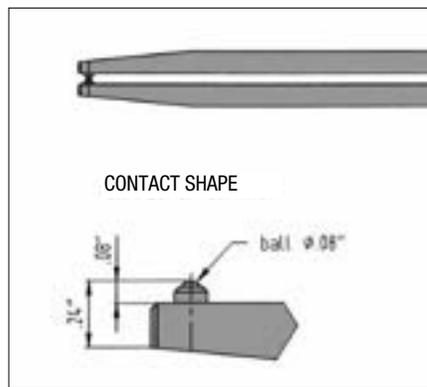

Measure Min-Wall over flange in recess

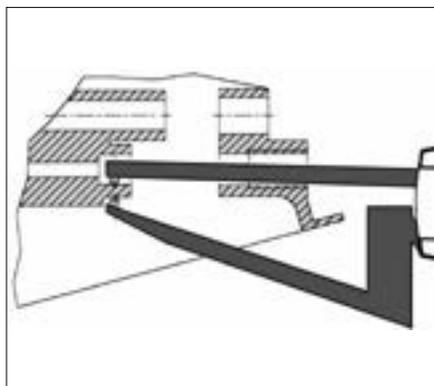

Awkwardly positioned Min-Wall is measured with angled contacts

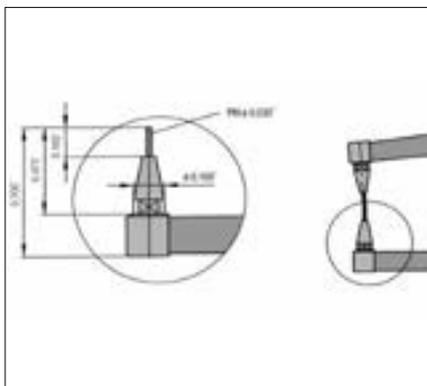

Modified contact points to measure hard-to-reach wall thickness

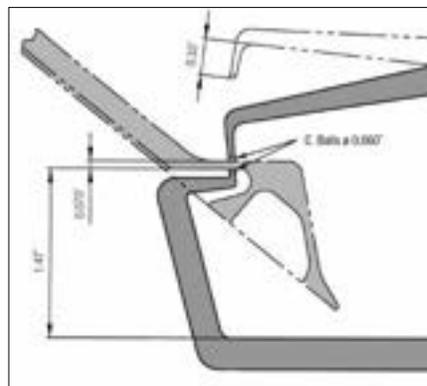

Measure thickness between ribbed material

Special arms

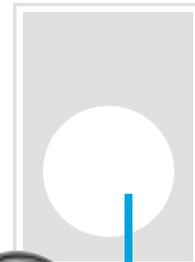

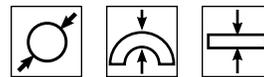

Special needle contacts

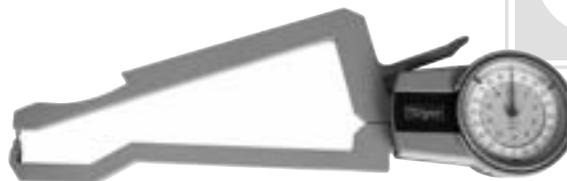

Hard-to-reach Min-Wall

SPECIAL APPLICATIONS CUSTOM DESIGNS

Measure bottom wall thickness of container.

302 Modified
Arms notched to clear part obstruction.

302 Special
Measure bottom wall thickness of flower vase.

302 Special
Parallel arms to measure thickness of walls in a web part 7" deep.

302 Special
Custom arms to reach over fixture and measure leading edge thickness of a turbine blade.

302 Special
Long reach thin arms to reach deep into part.

301 Special
Modified lower arm to reach into small diameter recess.

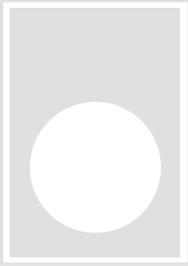

302 Special
Gage with radius arms.

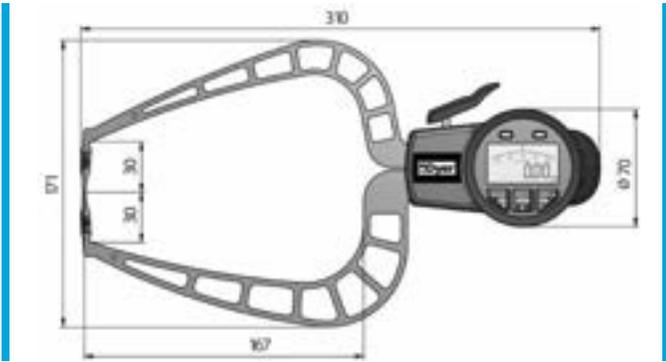

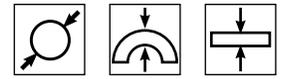

302 Special
Modified upper arm to reach deep into part.

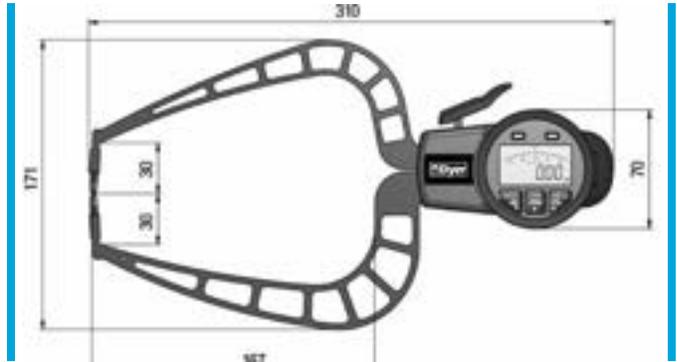

302 Special
Extra long lower contact to clear part range.

337 SERIES DEDICATED HIGH ACCURACY INDICATING OD RING GAGES

Maximum Measuring Accuracy

Linear $\leq \pm 0.000040"/\leq \pm 0.001$ mm
Repeatability $< 0.000040"/< 0.001$ mm

Fast, Accurate and Repeatable Measurements

Dyer's 337 Series indicating OD ring gages are used for repetitive bore measurement applications or dedicated high volume production runs.

This rugged and dependable 24-7 bore gage was designed with the operator in mind. Fast, easy to use and no operator error.

Best in Gage R & R performance with an impressive $\leq 10\%$ capability, even during high tolerance applications and when measuring small or large bores.

Automatic Centering and No Operator Error

In achieving the highest accuracies, a special centering sleeve is made to guide the gage onto the part. The carbide ball contact points housed in the centering sleeve along with the free floating movement permit the highest measuring accuracy. The measurement is "locked in" and no operator error is possible.

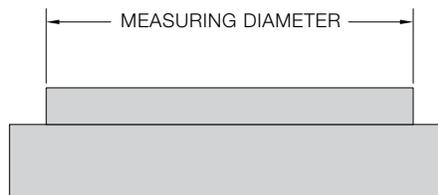

The spring-loaded outward contact pressure along with automatic centering and non tipping means no operator error when measuring bores.

Two-Point Floating Contact Measuring System

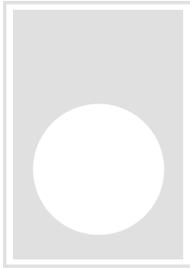

Positive two-point outward contact pressure and continuous on-line indication of the measured value permits the operator to see the bore's profile. The following geometry can be measured.

337 Series Dedicated High Accuracy Indicating OD Ring Gages

336 SERIES LARGE RANGE HIGH ACCURACY INDICATING SNAP GAGES

Maximum Measuring Accuracy

Linear Accuracy at $\pm 0.0001"/\pm 0.002$ mm
 Repeatability $\pm 0.000050"/\pm 0.001$ mm
 Gage R & R $\leq 10\%$ on high tolerance parts

Notable Features

- Extra large measuring range.
- Direct measuring axis design allows for maximum accuracy.
- Can be hand held or used in a stand.
- Self-centering for fast repeatable measurements.
- Accepts any style indicator.
- Special anvils are available. Fax or e-mail your specifications to us.

335 SERIES LARGE RANGE HIGH ACCURACY INDICATING SNAP GAGES

Dyer's 335 Series indicating snap gages are light weight and easy to use. These easily adjusted gages offer precision, repeatable measurements. They are 24/7 shop-rugged and perform $\leq 10\%$ on Gage R & R studies in high-tolerance applications.

Notable Features

- Fast size changes within the gage's 1.0"/25 mm range
- Contact travel 0.060"/1.5 mm standard, optional 0.100"/5 mm travel available. Contact Dyer.
- Gaging pressure easily adjustable
- Square 0.625"/16 mm carbide anvils are ground and lapped. The large lead-in radius allows for easy part loading and unloading
- Easily adjusted back stop is available in different types materials. i.e., steel, carbide, nylon. A nylon stop will protect parts during loading
- Available with optional bench stand.
- The indicating accepting collet accepts most all indicators and allows a 360° rotation
- Special anvils are available. Fax or e-mail us a part sketch of your application

Special contact designs available, contact Dyer.

How to Order

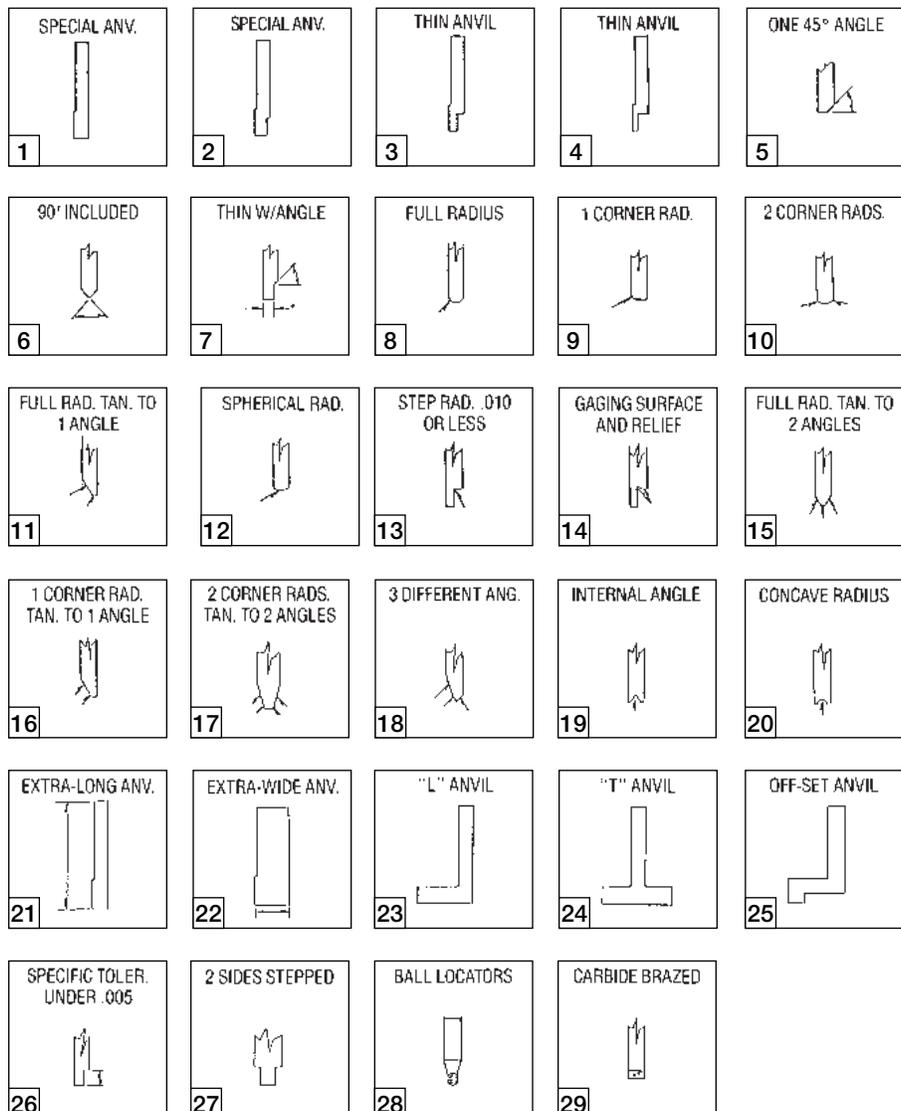

1. Select model range
2. Select an indicator

Optional

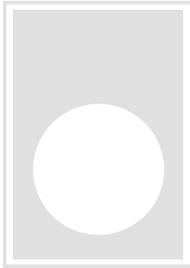

3. Select set master
4. Select a gage stand (335-400)

309 SERIES DIAL THICKNESS GAGES STANDARD AND SPECIAL APPLICATIONS

Notable Features

- Fast, repeatable measurements.
- Cast aluminum design, light-weight, easy "one-hand" operation.
- Spring-loaded contact, no operator influence on measurement.
- Lower contact sits on a tripod for easy adjustment and alignment.
- Rugged for shop-use.
- Large selection of indicators and frames.

Custom and Special Models

We will modify the arms and contacts to meet your special applications.

Send your present gage to Dyer's repair center and we will upgrade it to electronic indication.

309-010 gage with dial indicator

309-210 with digital indicator

Standard contact point options

All lower contacts are set on a 3-screw tripod in a fixed position. They adjust easily to keep the lower contact in the fixed position.

Lower contact positioned on three adjustment screws. Easy-to-square contacts.

Includes Mechanical Dial Indicator, Contacts and Lifting Lever.

Models 12.00" and 16.00" have mounting base for tabletop.

902 SERIES GROOVE WIDTHS/DEPTHS/SPACINGS UNDERCUT WIDTHS/SPACINGS

Special gage

Outside shoulder/groove height. Measure bottom surface of part to top of groove.

Special gage with part

Digital Indicator with standard depth gage bases

Standard Gage Bases and Accessories

Order No.	Description
902-411	2" depth gage base for ind. 1" & less
902-412	4" depth gage base for ind. 1" & less
902-413	6" depth gage base for ind. 1" & less
902-414	8" depth gage base for ind. 1" & less

Special depth gage to measure depth of key slot

Special depth gage to measure dimple indentation on part surface. Gage's base modified to set correctly on part

Special depth gage to measure over part obstruction

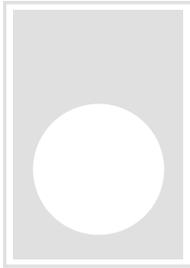

side view

Special fixture to measure multiple bore depths at one time on a machined casting

Dyer can design a special depth gage based on your specific application. Please contact Dyer with your needs.

550 SERIES INSIDE DIAMETERS RIGID, FLEXIBLE PARTS

Notable Features

- Fast, easy way to measure inside diameters of fixed, flexible and soft walled parts.
- Actual diameter is read at the ring and vernier scale in the handle.
- Measuring depth range is 15-50 mm.
- Laser marked scales and stainless steel tapes.

420/421 SERIES OUTSIDE CIRCUMFERENCE & DIAMETER OF CYLINDRICAL PARTS

Notable Features

- Fast, easy way to measure outside circumference and diameters of fixed, flexible and soft walled parts.
- Laser scaled tapes with 1mm/0.040" graduations and with 0.1mm or 0.005" graduations on vernier reading handle.
- Standard tape width of 16mm. Tape thickness of 0.2mm.
- Special tape width of 6/35/60mm and 0.05mm graduations vernier reading handle available upon request.

423 Series

Notable Features

- 423 Series are designed to measure the inside circumference and average diameter of round and oval bores.
- Laser scaled tapes with 1mm graduations and with 0.1mm or 0.005" graduations on vernier reading handle.
- Standard tape width of 20mm.
- Fast and easy use with the help of clamping handle mechanism.

454 SERIES COAXIALITY OF TWO BORE AXIS "ON ONE LINE"

A low cost way to measure the center line of two bores "on one line" at the machine.

The gage is centered in both bores using fixed and spring loaded balls. After zeroing the gage, the floating contact is rotated 360°, storing MIN and MAX dimensions.

A stepped bore with one reference bore and a second bore used as a bearing surface is a typical application.

Benefits of knowing your parts coaxiality

- Easy, time-saving, parts assembly
- Minimal friction
- Reduced service wear and silent running
- Longer part life

454 Series Coax Mandrel

Measure center line alignment errors between two bores

454 Series

454 Coax Mandrel

Measures valve shaft of a cylinder head

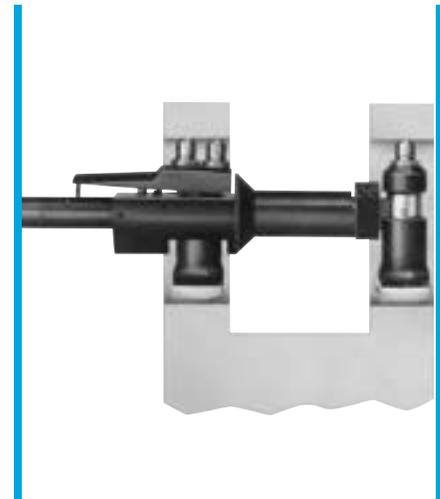

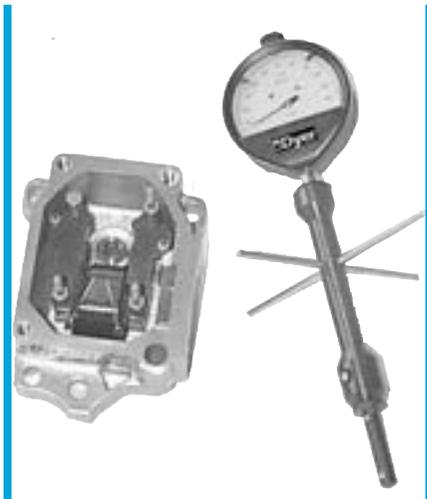

454 Series

454 Series Measuring contact is between two centers

454 Series specials

Measures the bearing bore of an electrical motor

900 SERIES ELECTRONIC INDICATORS

900-301

Notable Features

- Resolution 0.0005"/0.01 mm
- Range 0–0.500"/12.7 mm
- Preset, zero, ± direction
Go/± NG functions
- Preset/recall absolute number.
Encoder maintains settings and readings for life of battery, (even when power is off)
- SPC output
- Battery Power 5000 hours
- Face rotates 330°
- Stem Ø 0.375", contacts 4-48 UNF

900-305

Notable Features

- Resolution 0.00005"/0.001 mm
- Range 0–0.500"/12.7 mm
- Preset, zero, ± direction
Go/± NG functions
- Preset/recall absolute number.
Encoder maintains settings and readings for life of battery, (even when power is off)
- SPC output
- Battery Power 5000 hours
- Face rotates 330°
- Stem Ø 0.375", contacts 4-48 UNF

900-114

Notable Features

- Resolution 0.0001"/0.001 mm
- Range 0–0.500"/12.7 mm
- Holds min value/tolerance
- Preset up to 3 values
- Analog bar
- Preset, zero, ± direction
Go/± NG functions
- Preset/recall absolute number.
Encoder maintains settings and readings for life of battery, (even when power is off)
- SPC output
- Battery Power 5000 hours
- Face rotates 330°
- Stem Ø 0.375", contacts 4-48 UNF

900-315

Notable Features

- Resolution 0.0005"/0.01mm
- Range 0–0.500"/0-12.7mm
- Zero, ± direction
- No preset to absolute
- SPC output
- Battery power 20,000 hours
- Low Cost
- Face rotates 330°
- Stem Ø 0.375", contacts 4-48 UNF

900-200

Notable Features

- Any ratio calculation can be programmed
- Resolution adjustable from 0.000010"–0.050" (0.002 mm–1 mm)
- Range 0–0.500"/12.7 mm
- Preset, zero, ± direction Go/± NG functions
- Preset/recall absolute number.
Encoder maintains settings and readings for life of battery, (even when power is off)
- SPC output
- Battery Power 5000 hours
- Face rotates 330°
- Stem Ø 8 mm, contacts 2.5 mm

900-325

Notable Features

- Resolution 0.000050"/0.0001mm
- Range 0–0.500"/0-12.7mm
- Zero, ± direction
- No preset to absolute
- SPC output
- Battery power 20,000 hours
- Low Cost
- Face rotates 330°
- Stem Ø 0.375", contacts 4-48 UNF

450, 451, 458 SERIES DIAL INDICATORS

451-001 Inch

Notable Features

- Graduation 0.000050"
- Range 0.004" (± 0.002 ")
- Dial face 20-0-20
- Range per revolution ± 0.002 "
- Stem \varnothing 8 mm, spindle lapped
- Fine adjustment at top of case

451-011 Metric

Notable Features

- Graduation 0.001 mm
- Range 0.1 mm (± 0.050 mm)
- Dial face 50-0-50
- Range per revolution ± 0.050 mm
- Stem \varnothing 8 mm, spindle lapped
- Fine adjustment at top of case

450-000 Inch

Notable Features

- Graduation 0.000050"
- Range 0.004" (± 0.002 ")
- Dial face 20-0-20
- Range per revolution ± 0.002 "
- Stem \varnothing 8 mm, spindle lapped

458-003 Metric

Notable Features

- Resolution 0.002 mm
- Range 1 mm
- Dial face 0-100-0
- Range per revolution 0.2 mm
- Stem \varnothing 8 mm, spindle lapped

458-001 Inch

Notable Features

- Graduation 0.0001"
- Range 0.200"
- Dial face 0-5-0
- Range per revolution 0.010"
- Stem \varnothing 3/8", spindle lapped

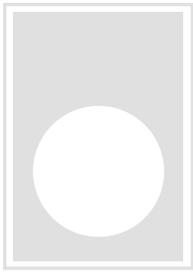

458-002 Inch

Notable Features

- Graduation 0.0005"
- Range 0.500"
- Dial face 0-25-0
- Range per revolution 0.010"
- Stem \varnothing 3/8", spindle lapped

450, 451, 458 SERIES DIAL INDICATORS

450-001 Inch

Notable Features

- Resolution 0.0001"
- Range 0.040"
- Dial face 0-10
- Range per revolution 0.010"
- Stem Ø 8 mm, spindle lapped

450-002 Inch

Notable Features

- Resolution 0.0005"
- Range 0.500"
- Dial face 0-50
- Range per revolution 0.050"
- Stem Ø 8 mm, spindle lapped

458-004 Metric

Notable Features

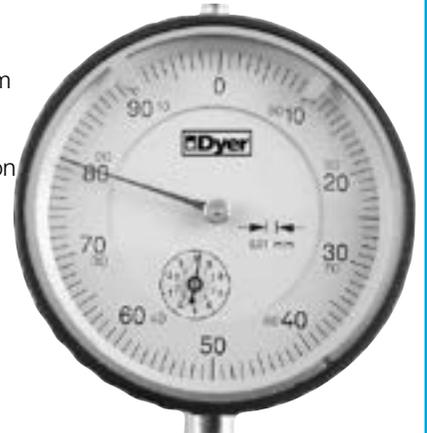

- Resolution 0.01 mm
- Range 10 mm
- Dial face 0-50-0
- Range per revolution 1.0 mm
- Stem Ø 8 mm, spindle lapped

450-012 Metric

Notable Features

- Resolution 0.01 mm
- Range 10 mm
- Dial face 0-100
- Range per revolution 1.0 mm
- Stem Ø 8 mm, spindle lapped

458-015 Inch

Notable Features

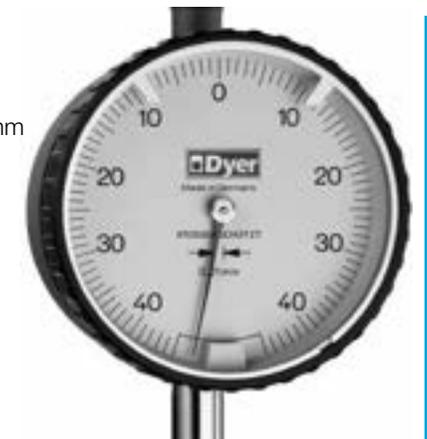

- Resolution 0.001"
- Range 0.080"
- Dial face 40-0-40
- Stem Ø 8 mm, spindle lapped

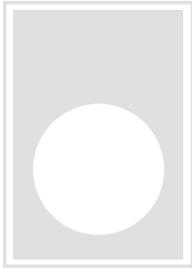

458-020 Metric

Notable Features

- Resolution 0.010 mm
- Range 0.80 mm
- Dial face 40-0-40
- Stem Ø 8 mm, spindle lapped

981 SERIES DISPLAY BOX

981-200 Digital Readout for one axis measurements

Notable Features

- The 981-200 has selectable resolution as low as 0.000020" (0.0005mm)
- Can store up to 1000 measured values
- Minimum/Maximum value storage
- Can calculate mean value and standard deviations
- Creates histograms and control charts
- Various other statistical functions

981-200 Box shown
with motorized control device for transducer probe

Specifications	
Data Interface	Two serial interfaces: RS-232-C/V.24 110 to 115 200 baud USB Type B (UART)
Operating temperature	0°C–50°C (32°F–122°F)
Storage temperature	-40°C–85°C (-40°F–185°F)
Relative air humidity	Annual mean: < 75% In exceptional cases: <90%
Protection (IEC 60529)	IP 40 rear panel; IP 54 front panel
Weight	Approximately 2.5 kg (5.5 lb)
Housing	Benchtop Design, cast metal housing
Housing dimensions	Width 211 mm Height 112 mm (including feet) Depth 251 mm (including connector)

981-200 Box shown
with various transducer stands

981 SERIES DIGITAL READOUTS VISUAL FEEDBACK

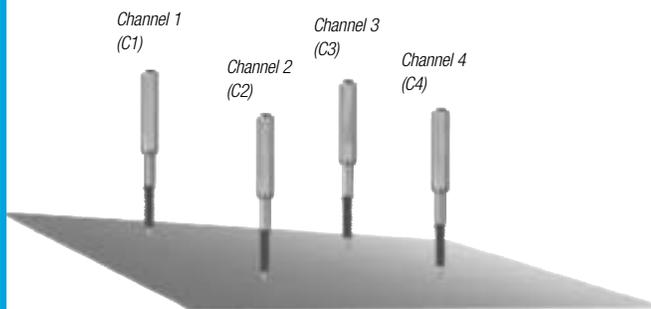

Overview

- Up to 8 Encoder or LVDT inputs.
- LVDT Signal Conditioning.
- Color LCD Display.
- Custom Formula.
- Data Charts & Graphs.
- SPC Database & Calculations.
- Assignable dimension tolerances.

Input/Output

- Up to eight encoder or full bridge LVDTs.
- Provides LVDT signal conditioning.
- Encoder inputs; Heidenhain, Mitutoyo, Nikon.
- LVDT inputs; Solartron, Marposs, Tesa.
- Display up to 16 dimensions.
- Parallel/serial port for printing/communications.
- Two programmable relay outputs.

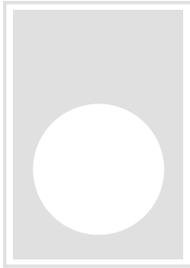

Advanced Calculations

- Create custom formulas to track critical dimensions.
- Assign formulas to determine max and min dimensions.
- Unique "trip function" automates data entry.
- Determine run-out of a rotating shaft.
- Encoders can be combined algebraically to calculate thickness, flatness and volume.

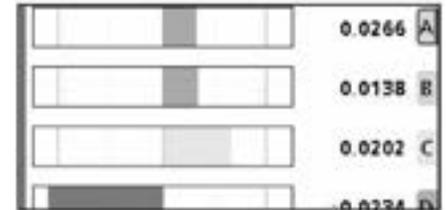

$$F = \max (C1, C2, C3, \dots Cn) - \min (C1, C2, C3, \dots Cn)$$

DIGITAL READOUTS 981 SERIES

A GAGING BREAKTHROUGH FOR THE FACTORY FLOOR

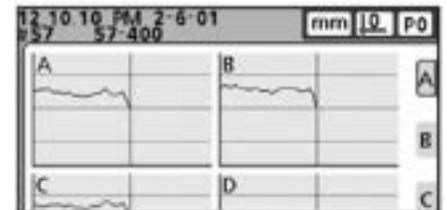

This DRO is a multi-axis metrology display that accepts up to eight discrete inputs. It features intuitive visual displays, helpful audio cues and user-defined formulas. It also reports dynamic Min/Max measurements, provides SPC analysis from an integrated database and includes connectivity to PCs and other peripherals.

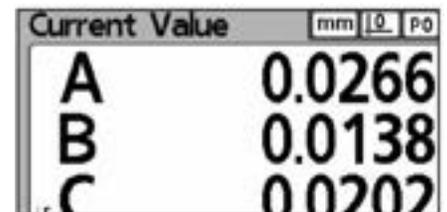

Visual feedback

A highly visible, intuitive and familiar interface with standard color cues. Instantly informs operators of pass/fail performance details for critical part dimensions.

Integrated SPC database

Store, retrieve and manage enormous amounts of measurement data on the shop floor. Check quality control of each gage. Share information locally and globally.

Formulas

Up to 16 output channels apply mathematical formulas to measurement data for on-the-spot part analysis.

981 Series Specifications		Inputs
LCD	6" color	4 and 8-axis input available External connections: Footswitch Remote keypad Touch probe RS-232C serial port Parallel port – 16 pin
Display digit size	.45"	
Resolution down to	.000004" or .0001 mm	
Operating temperature	0°C–45°C	
Enclosure (W × H × D)	11.5" × 7.5" × 2.75"	
Base (W × H × D)	10" × 2" × 7.5"	
Enclosure weight	5.4 lbs	
Base weight	6.2 lbs	
Input voltage range	85 VAC–264 VAC	
Input frequency	43 Hz–63 Hz	
		Outputs
		Parallel port – 16 pin / Data output to USB stick

Ordering Information

Analog	Order No.
4 Gage Input	981-004
8 Gage Inputs	981-008

Digital	Order No.
up to 16 Gage Inputs	981-000

Standard boxes configured for Heidenhain probes.

981 SERIES DIGITAL READOUTS

View as Column Gages

Color-coded vertical or horizontal bar graphs
 User selectable high/low tolerance limits
 User-settable audio warning limits
 Display one, four or eight bar graphs for quick pass/fail notification

Easy to view DRO

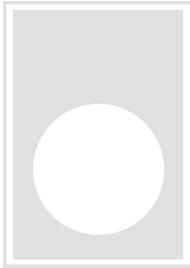

Customizable display to reflect part dimension
 Large, easy to read numerical display
 Color coded pass/fail with audio alert
 Inch/mm toggle

Digital Readouts

- Ergonomic design
- Intuitive user interface
- Familiar, powerful measurement tools
- Single- and multi-sensor environments

981 SERIES DIGITAL READOUTS DATA VIEWING AND COLLECTION

Data Output

- RS232 interface to computer.
- Customizable color report print-outs using standard HP ink jet printers.
- 2 switching outputs.
- Output single record measurement or an entire data report.

Historical Data Views

- Display single or multiple dimensions.
- Display SPC statistics.
- Each dimension is time and date stamped.

SPC Charts

X-Bar and range charts.
Assign subgroup size.
Set visual warning limits.
Display charts for one, four or eight dimensions on screen.

SPC Charts

- Display process capability charts.
- Display charts for one, four or eight dimensions on screen.

n/c - no charge
n/a - not available

Build Your Own Gage

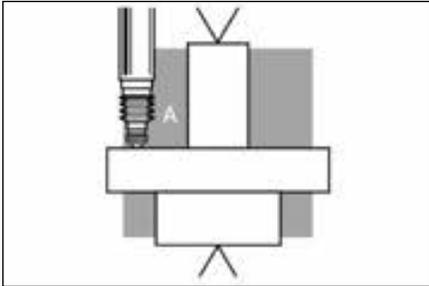

Using Dyer Digital Probes, linear encoders and digital readout, you can easily build your own tabletop gage.

Digital Readout

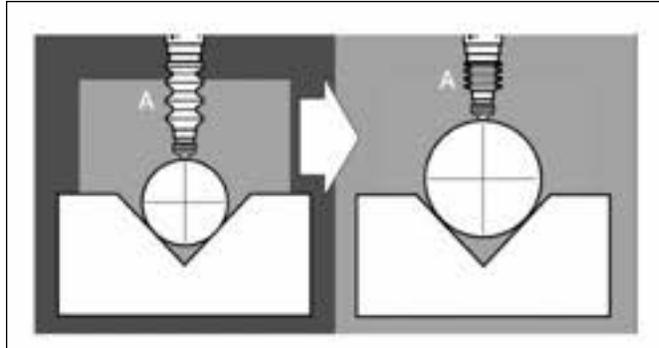

This is Dyer's most advanced, yet easy-to-use, Digital Readout. "Auto custom" display guides the operator through the setup or Dyer will set up a system for you.

Network Systems

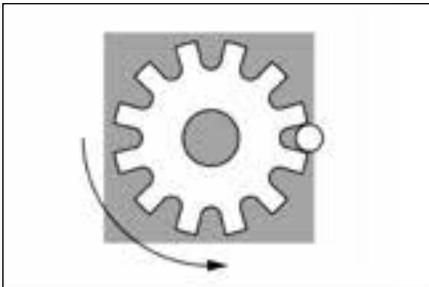

Easily sets up for SPC Data Collection.

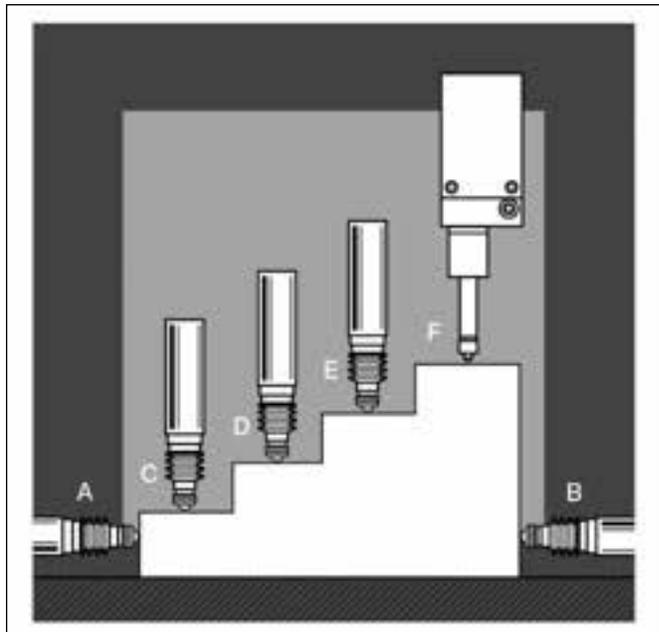

TIR max - min measuring

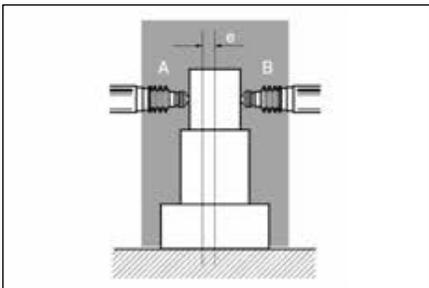

Scaling factor measuring

TIR of gears

Global pass/fail measuring of up to 30 scan channels (up to 30 probes). Each channel can be either an individual probe A + B or A - B and have its own set of limit and preset values.

Scaling mode

$$e = A - B$$

$$\frac{2}{\text{Max} - \text{min}}$$

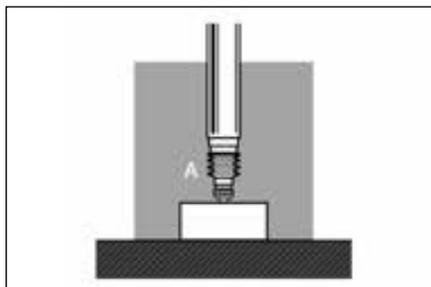

124, 125, 971, 981 SERIES MEASURING APPLICATION SOLUTIONS

Build Your Own System

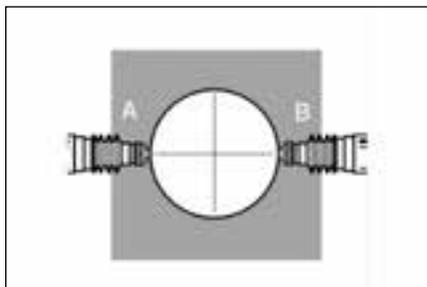

Dyer's Digital Probes and Readouts along with our component fixturing will make the high accuracy measurements you require. Just contact Dyer's office with your measuring applications.

Absolute Measurements

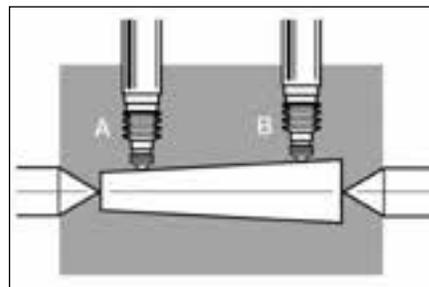

The Dyer Digital Probe is an absolute measuring device, which means when you switch it on it returns to the correct output regardless of movements during the off periods.

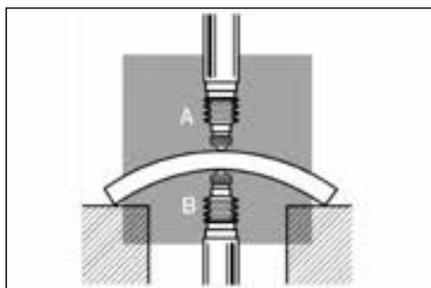

Height or gage block measuring

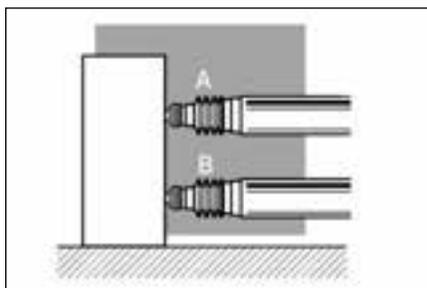

Diameter measuring independent of eccentricity

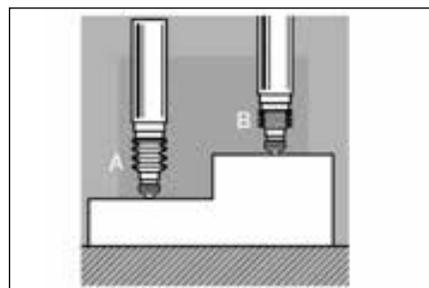

Taper measuring independent of component dimensions

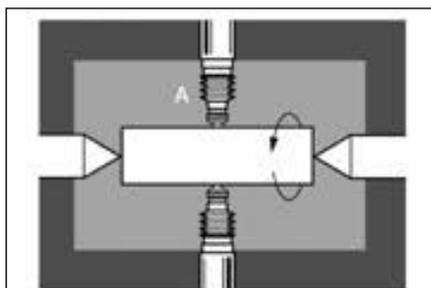

Thickness measuring independent of component shape or location

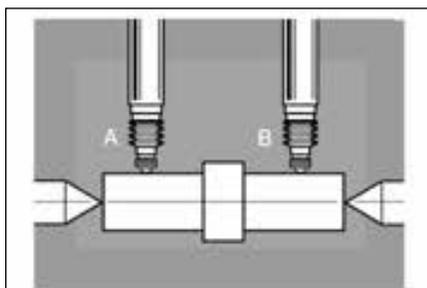

Squareness measuring independent of position

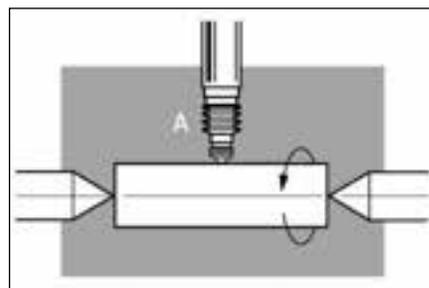

Step height measuring

Max - min or max + min

Measuring alignment of two shafts

Out-of-roundness measuring independent of eccentricity with sum of measurement

SERIES 801 MASTER DISCS STEEL AND CHROME

Notable Features

- All gage master setting discs regardless of class are lapped to size and polished. Roundness and taper of all gages will not exceed 50% of the applicable gage maker's size tolerance and are non-accumulative.
- All inch master discs will be furnished with black insulators and metric sizes yellow insulators. Red and green available on request.

Dyer setting discs are available in steel or chrome and in three styles.

When ordering master discs, please specify:

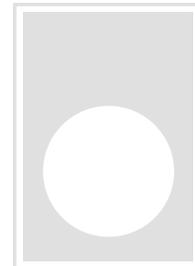

1. Exact size
2. Style in steel or chrome
3. Class

If you require chrome, please specify when ordering. Add 30% to standard price.

SERIES 800 RING GAGES STEEL & CHROME

- All ring gages regardless of class are lapped to size and polished.
- Non-gaging areas are black oxidized and ring faces are surface ground.
- Gage blanks meet all requirements of B47.1-1988.
- Ring gages are manufactured in accordance with ANSI Specification B89.1.6-1984.
- Roundness and taper of all gages will not exceed 50% of the applicable gage-maker's size tolerance and are non-accumulative.
- Traceable certification and calibration available. Contact Dyer office.

Dyer ring gages are available in three tolerances:

MASTER—Bilateral (split) tolerance

GO—Unilateral (minus) tolerance (largest size)

NO GO—Unilateral (plus) tolerance (smallest size)

When ordering ring gages—please specify:

1. Exact size
2. Class
3. Tolerance (Master, Go, or No Go)

Above 1.510"

Below 1.510"

We recommend master ring gages for setting Dyer inside diameter gages.

UNIVERSAL BORE GAGE SET MASTERS LARGE & SMALL DIAMETERS

Adjustable Range, Setting Masters For Internal Diameter Gages

Repeatable Mastering of Large Diameter Internal Gages

Precise mastering of large diameters can be a challenge, particularly when Master Setting Rings are not available or too expensive. It is important that ID gages are repeatably set when using a setting master. Both the gage setup and the part measuring need to be Gage R & R capable.

Notable Features

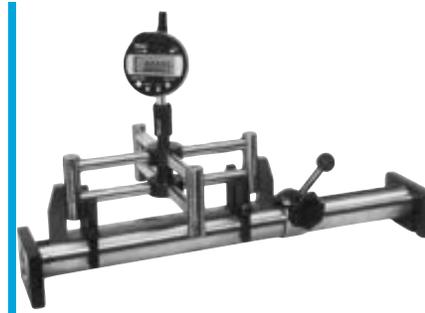

- A ratchet type clamping handle results in a reproducible clamping force of the gage blocks in the setting master.
- No operator influence during the gage mastering setup, "hands-off mastering".
- The Setting Master special jaws (designed for each gage type) means repeatable, large diameter gage setups.
- Rectangular gage blocks, ringed together, are held in precise position within the setting master's size range slot. Gage blocks are not included.
- Fast range changes and setup times lower costs.
- Large, adjustable range results in cost justifiable gaging and maximum value.
- One basic unit with different jaw setting components allows this master to be used with many internal gages.

Each Set Master System includes:

- Individual gage "setup" stand/fixture that can master a gage series in the horizontal or vertical axis position.
- One (1) set of adjustable locating jaws that hold the gage's centering base in position mastering.
- One (1) pair of carbide parallel anvils, lapped to precision grade gage block standards.

Model 410-010 Set Master with 222 Series Precision Bore Gage in a vertical measuring axis mastering setup.

415 SERIES ELECTRONIC AUTOMATIC ADJUSTABLE SETTING MASTERS

Notable Features

- Automatic positioning feature is designed to set a wide variety of bore, groove, and OD gages. Even indicators and 3-point gages can be mastered
- A Heidenhain high precision optical scale is utilized to ensure highest accuracies
- Safe and simple operation: A zero setting for any instrument can be made by just typing a desired value into unit. CNC motorized movement makes this possible.
- No need to purchase master rings or gage blocks
- Wide range of adapters are offered to aid in setting many different types of devices
- Ceramic reference pads come standard with the unit
- Electronic LCD display
- Stores up to 100 preset positions to set your most common gages
- Remote PC control is possible
- Store data via USB port
- Special customized models are available. Please contact Dyer Engineering for your specific needs.

Dyer's Specialized Quality Repair Center

We repair most makes and models:

- All Dyer gages
 - Intertest, Oditest, Quicktest
- Dial and test indicators
- Dial thickness gages
- Dial bore gages
- Dial calipers
- Electronic repair on all Dyer products

We repair most manufacturers' models:

- Chicago Dial
- Dorsey
- Dyer
- Fowler
- Mahr-Federal
- Mitutoyo
- SPI

Quality Standards

Our quality standards include three (3) quality inspections. It is our policy to put a repaired gage in equal to new condition. We completely disassemble all gages, ultrasonically clean them, inspect all moving parts, and replace all worn parts. The gage is then reassembled and calibrated on equipment directly traceable to NIST standards. Your gage is now processed through three separate quality inspections. Each gage is checked for calibration, mechanical movement, and smoothness. Our customer's satisfaction is guaranteed on all repaired gages.

ISO 17025

Certificate of Calibration for each gage available upon request.

Service Information

Dyer stocks a parts inventory exceeding \$100,000. Normal repair is two weeks or less. First in, first out. We offer a 24-48 hour Red Line repair service. It is our policy to proceed with a repair if it does not exceed 65% of replacement costs.

Specials and Modifications

For a moderate price, our skilled technicians can modify many of our standard stock gages. We will alter arms, contact points, probes, etc. to fit your specific needs. Many of our gaging systems are made of modular components enabling us to quickly create a special gage to meet your requirements. Prompt, one- or two-day service is available on many Dyer specially modified gages.

240/440 gage assemblies and special application gages

Custom modifications and general gage repairs

Send gages for repair to: Attn: Repair Department • The Dyer Company • 1500 McGovernville Road • Lancaster PA 17601

Providing Thousands of Custom & Stock Production Gages for Precision Bores, Grooves, Min-Wall, Thickness, and Special Applications

Dyer Company is a technical leader in precision bore gages, ID/OD Groove gages, min-wall / thickness gages and special application gages. For over 40 years we have supplied our customers with the highest quality gages that speed measuring times and eliminate operator error. Dyer gages save time, have proven designs, are fast, accurate, repeatable and 24-7 shop rugged.

As a manufacturer and supplier of unique hand and table top gages, we guarantee a ≤10% gage R & R capability. We offer quick delivery, 1-5 days for standard, special and custom design gages.
